Food Chains and Food Webs - Previewing Texts

Using Pearson Science SB7 p.172 - 175

Heading	Sub-heading	Sub-sub-heading
Food chains and food webs	Predators and prey	
	Food chains	*1.*
	Food webs	

1. Complete the table by looking at the pages from 172 - 175 and finding the missing sub-sub-headings.

2. What 2 visual clues are used in the textbook to help you tell the difference between the heading, sub-heading and sub-sub headings?

_____

3. What extra information (apart from text) is presented in the chapter to help you understand?

_____

_____

4. If you were asked to answer some questions about decomposers, which ‘heading’ would you look for?

_____

5. If you wanted to know the key words to learn in this chapter how would you find them?

_____

6. Match the words to their meanings:

WORD	MEANING
Predator	The flow of energy from organism to organism
Prey	The process by which plants make their own food
Competitors	Something that has to eat food to get energy
Food chain	An animal that gets eaten
Chlorophyll	Something that can make its own food
Photosynthesis	A number of food chains combined to show eating relationships
Producers	Organisms that break down dead matter
Consumers	A chemical in plants leaves used to trap the Sun’s energy
Decomposers	An animal that eats another animal
Food web	When two organisms compete for food, shelter, mates etc.

7. Give an example of a predator and a prey _____

_____

_____

8. List some things that organisms might compete for _____

_____

_____

_____

9. Describe Figure 5.2.3 _____

_____

_____

10. Why is Figure 5.2.4 included on p.174? _____

_____

_____

11. What does figure 5.2.7 show? _____

_____

_____
