Major Earth Resources

Natural Resources

1. What is a resource?

2. List the major natural resources on Earth.

Renewable and non-renewable resources

1. What determines whether a resource is renewable or not?

2. What is a renewable resource?

3. Give two examples of renewable resources.

4. What is a non-renewable resource?

5. Give two examples of non-renewable resources.

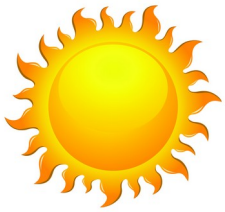

Living things as a resource

1. Living things are a resource for _____ and _____
2. They provide _____ and _____ for other organisms.
3. Forests that are cut down can be _____ and animals, like cows, can be replaced through _____.
4. Living things are a _____ resource.

Air as a resource

1. Air is a mixture of _____, _____ and _____.

2. Oxygen in the air is used by _____ and _____, but is constantly being replaced by _____.
3. Carbon dioxide in the air is used by _____ to make their own _____, but is constantly being replaced by _____.
4. Air is a _____ resource.

Sunlight as a resource

1. Plants use sunlight to _____
2. Sunlight warms the Earth's _____, _____ and _____.
3. The sun is a _____ and will produce energy for _____.
4. Sunlight is a _____ resource.

Water as a resource

1. All living things need _____ to _____.
2. Water can move from place to place through the _____
3. Some new water is made each day, but it is thought that the total amount of water on Earth has not changed much since Earth was formed.
4. Water is a _____ resource.

Rocks as a resource

1. Rocks provide two different resources: the _____ and the _____ in the rocks.
2. Most of the rocks formed on the Earth were formed _____.
3. Only a tiny fraction of the Earth's rocks are being replaced each year.
4. Rocks are a _____ resource.

Oil and coal as resources

1. Oil and coal are materials found _____.
2. They were formed from _____ _____and _____ that lived millions of years ago.
3. Oil and coal are _____ resources.

Soil as a resource

1. Rocks can be worn away by _____ and _____ to form _____.
2. Sediments are carried away and deposited making new soil and renewing old soil.

3. It takes hundreds or thousands of years to form a few _____ of soil.
4. Human activities have _____ this cycle so soils are not being _____.
5. Soil is a _____ resource.
