Separation Challenge

Your task is to separate a mixture of iron filings, sand and copper sulphate.

In the space below, list some of the properties of each substance.

Iron Pieces **Sand** **Copper Sulphate**

Use the table below so outline the process you will use to separate each substance.

What will you separate	How will you separate it	What equipment will you need	What will be left in the mixture

There will be two prizes awarded at the end of this challenge:

- One for the group who can recover the most copper sulphate from their mixture.
- One for the group who can grow the biggest copper sulphate crystal.
