

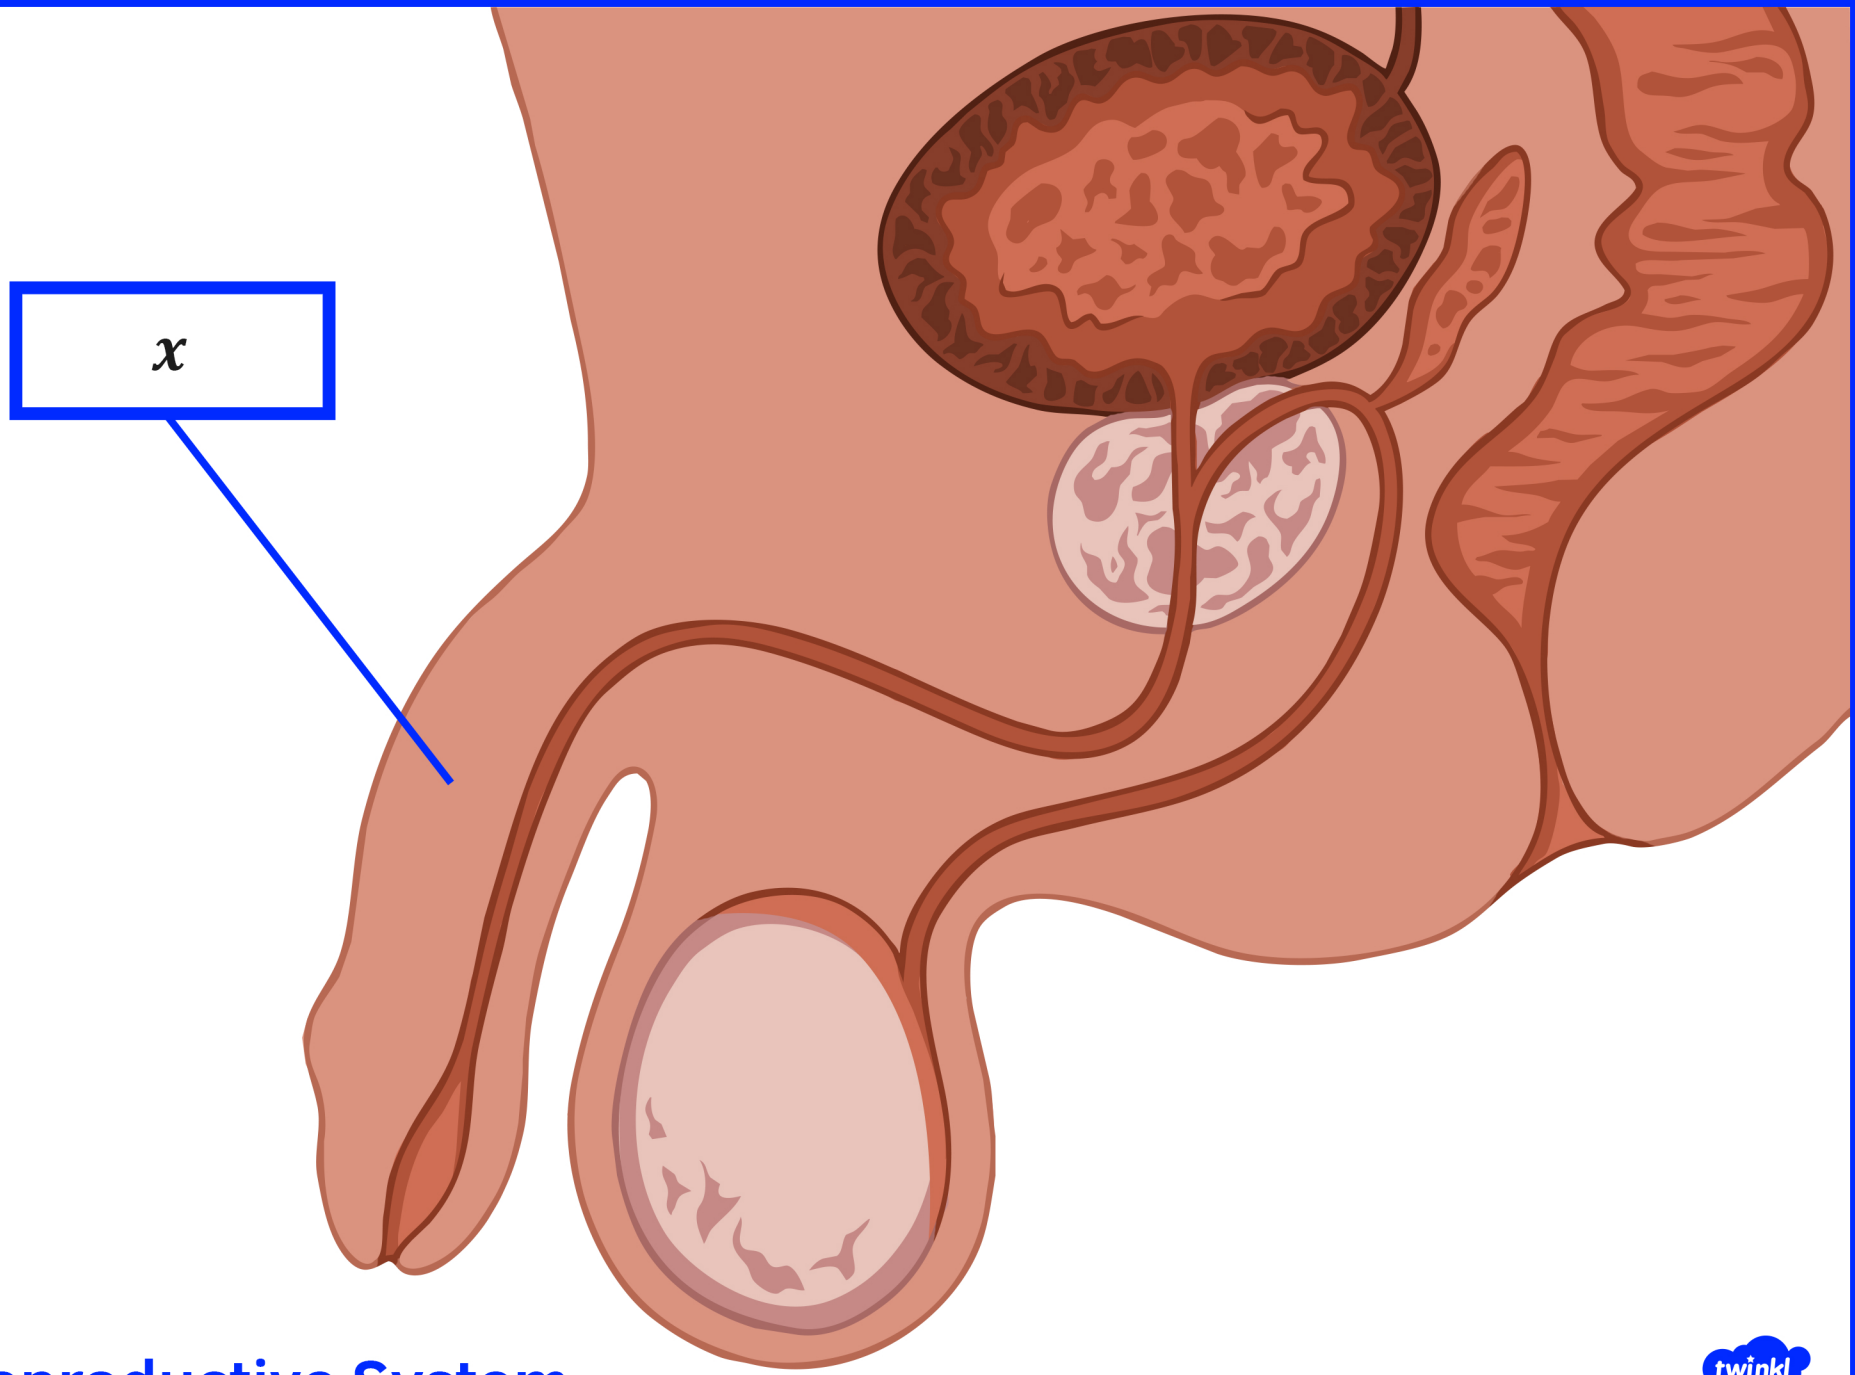
# Male Reproductive System

# Prostate Gland

# Function:

To produce fluids that provide the sperm cells with nutrients.

The mixture of sperm and fluids is called semen.

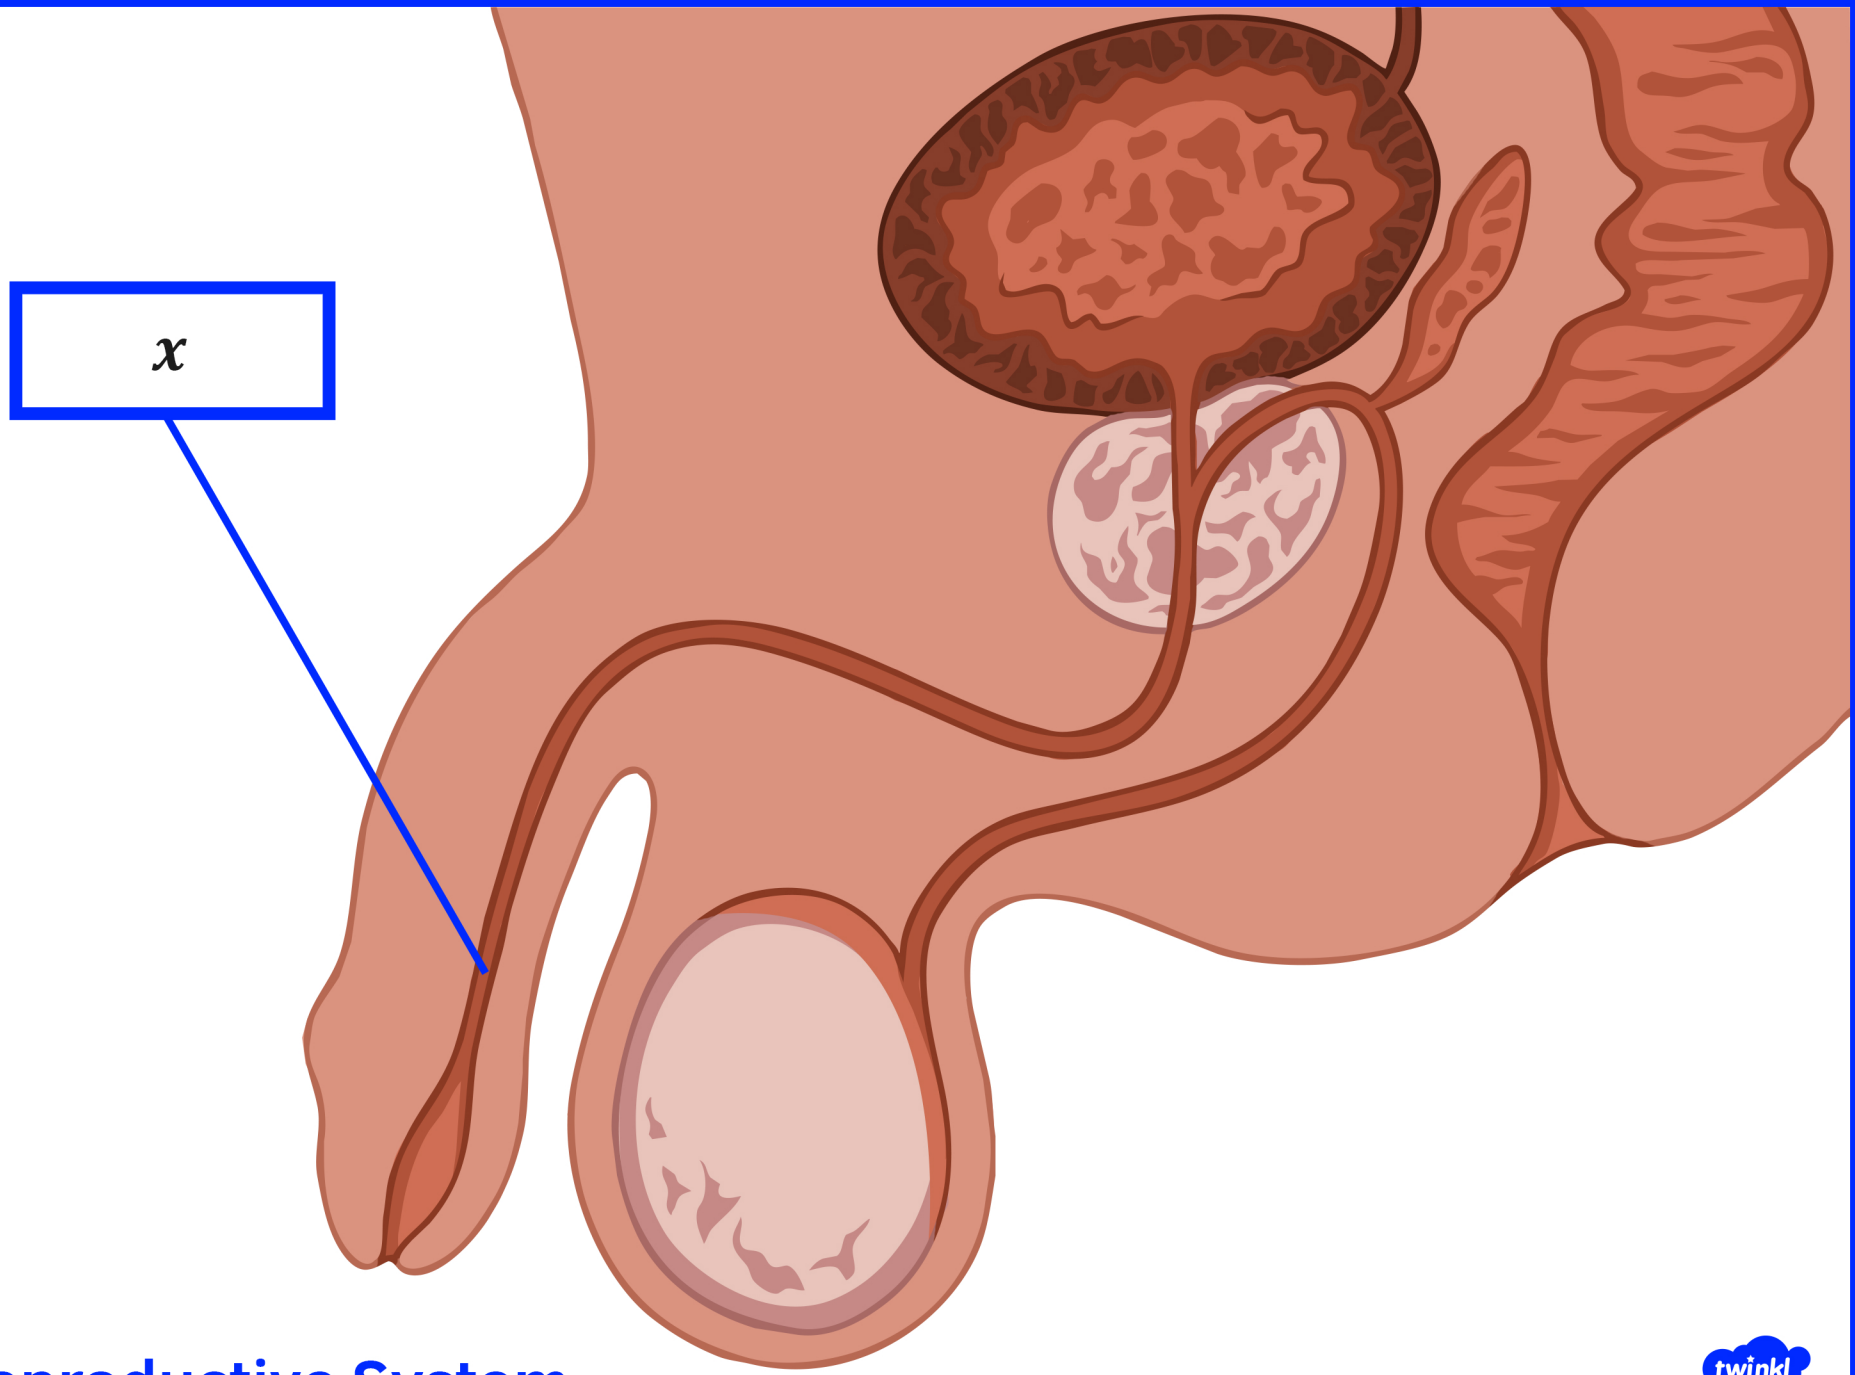


# Male Reproductive System

# Penis

# Function:

To pass semen into the vagina of a woman during sexual intercourse.

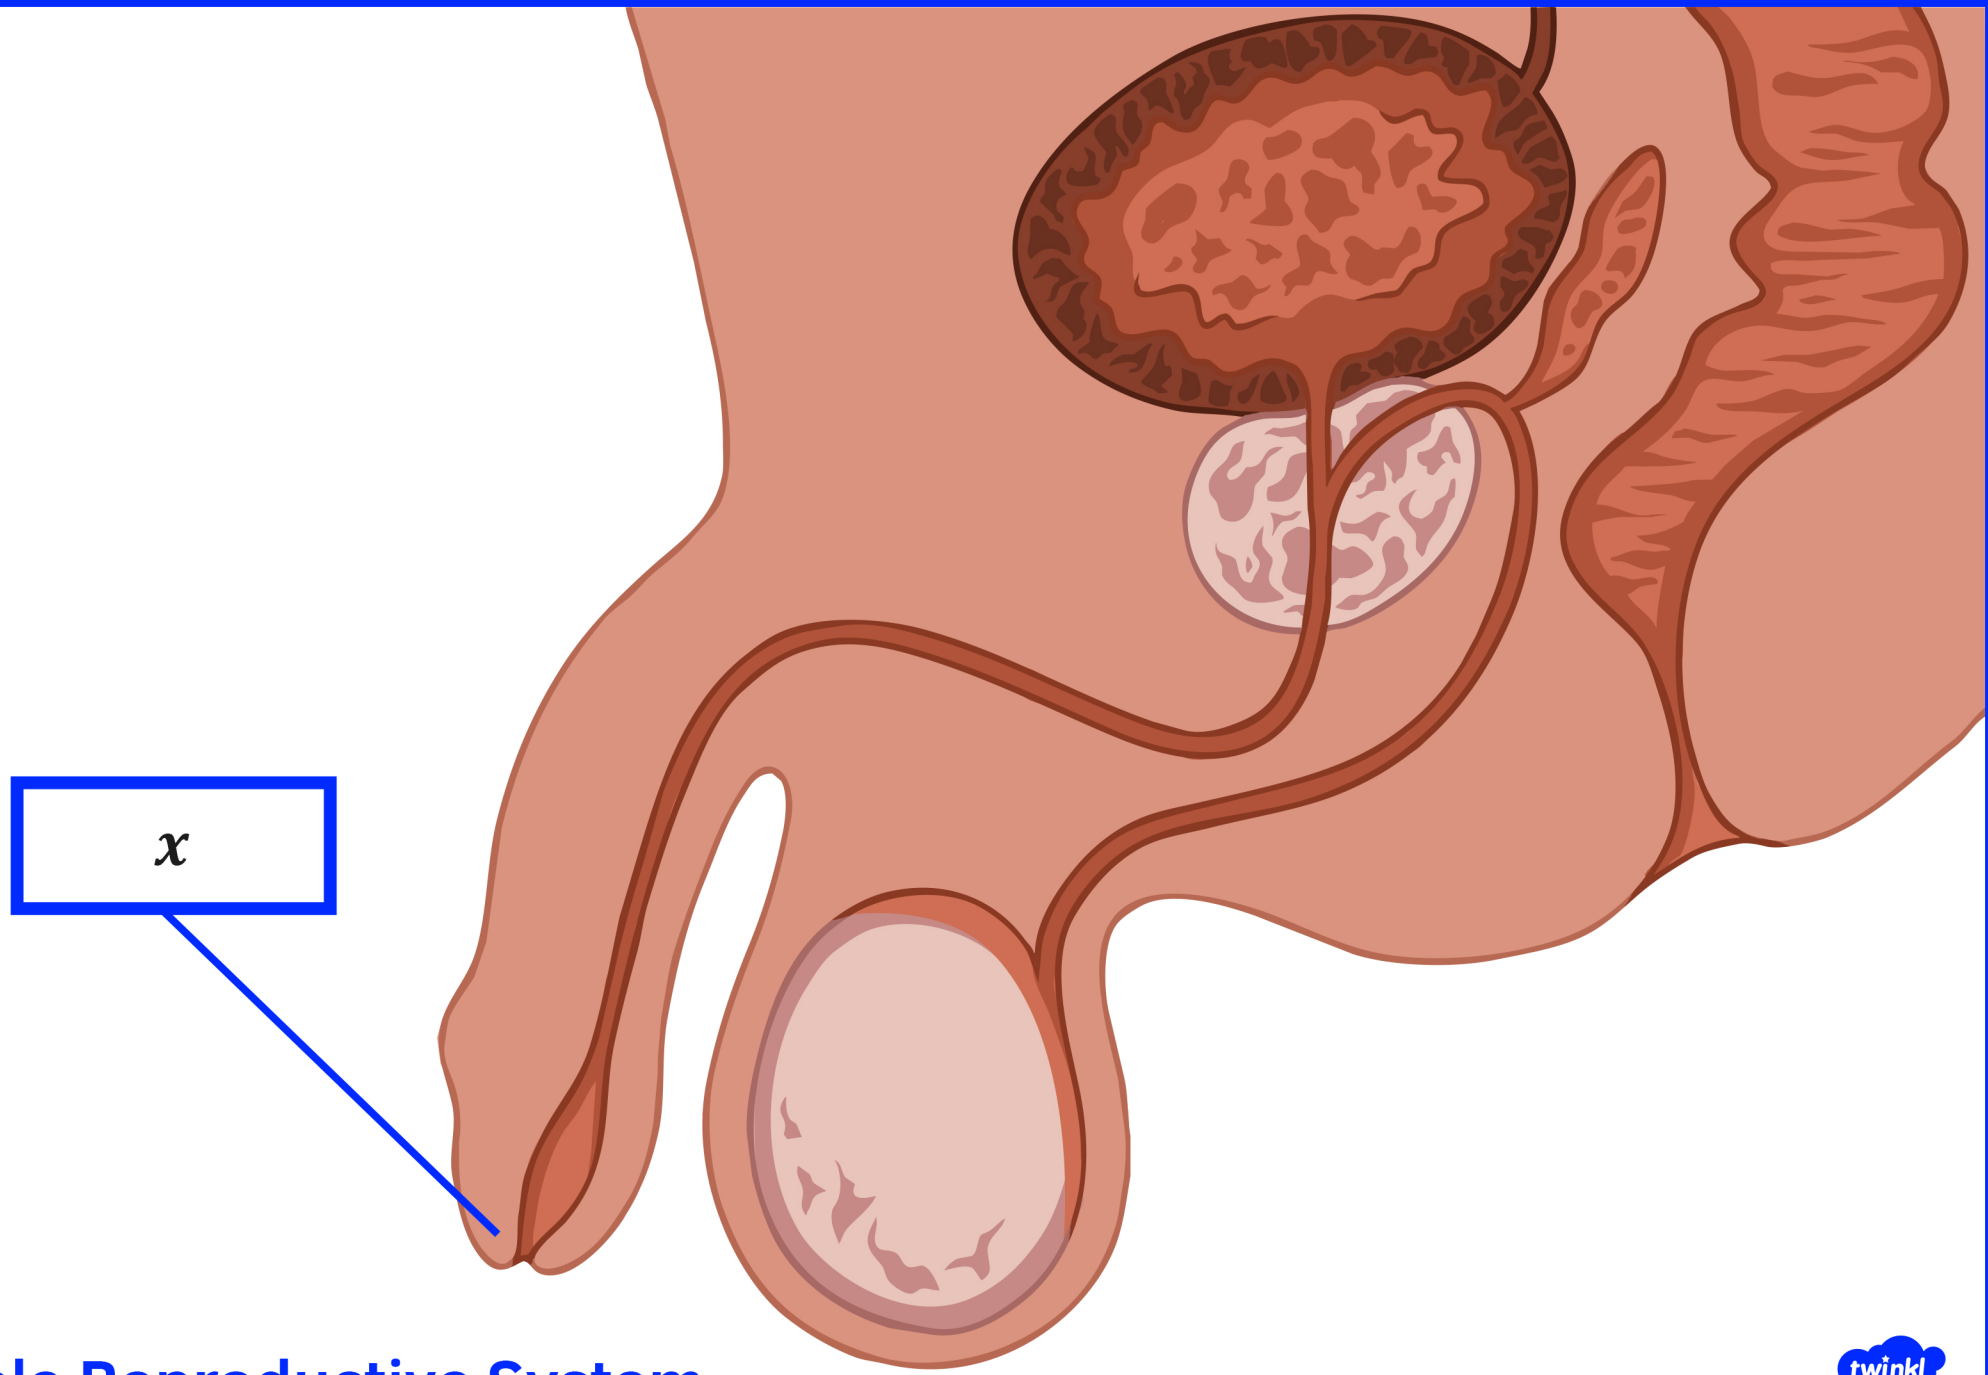


# Male Reproductive System

# Urethra

## Function:

**A tube inside the penis that can carry urine or semen.**

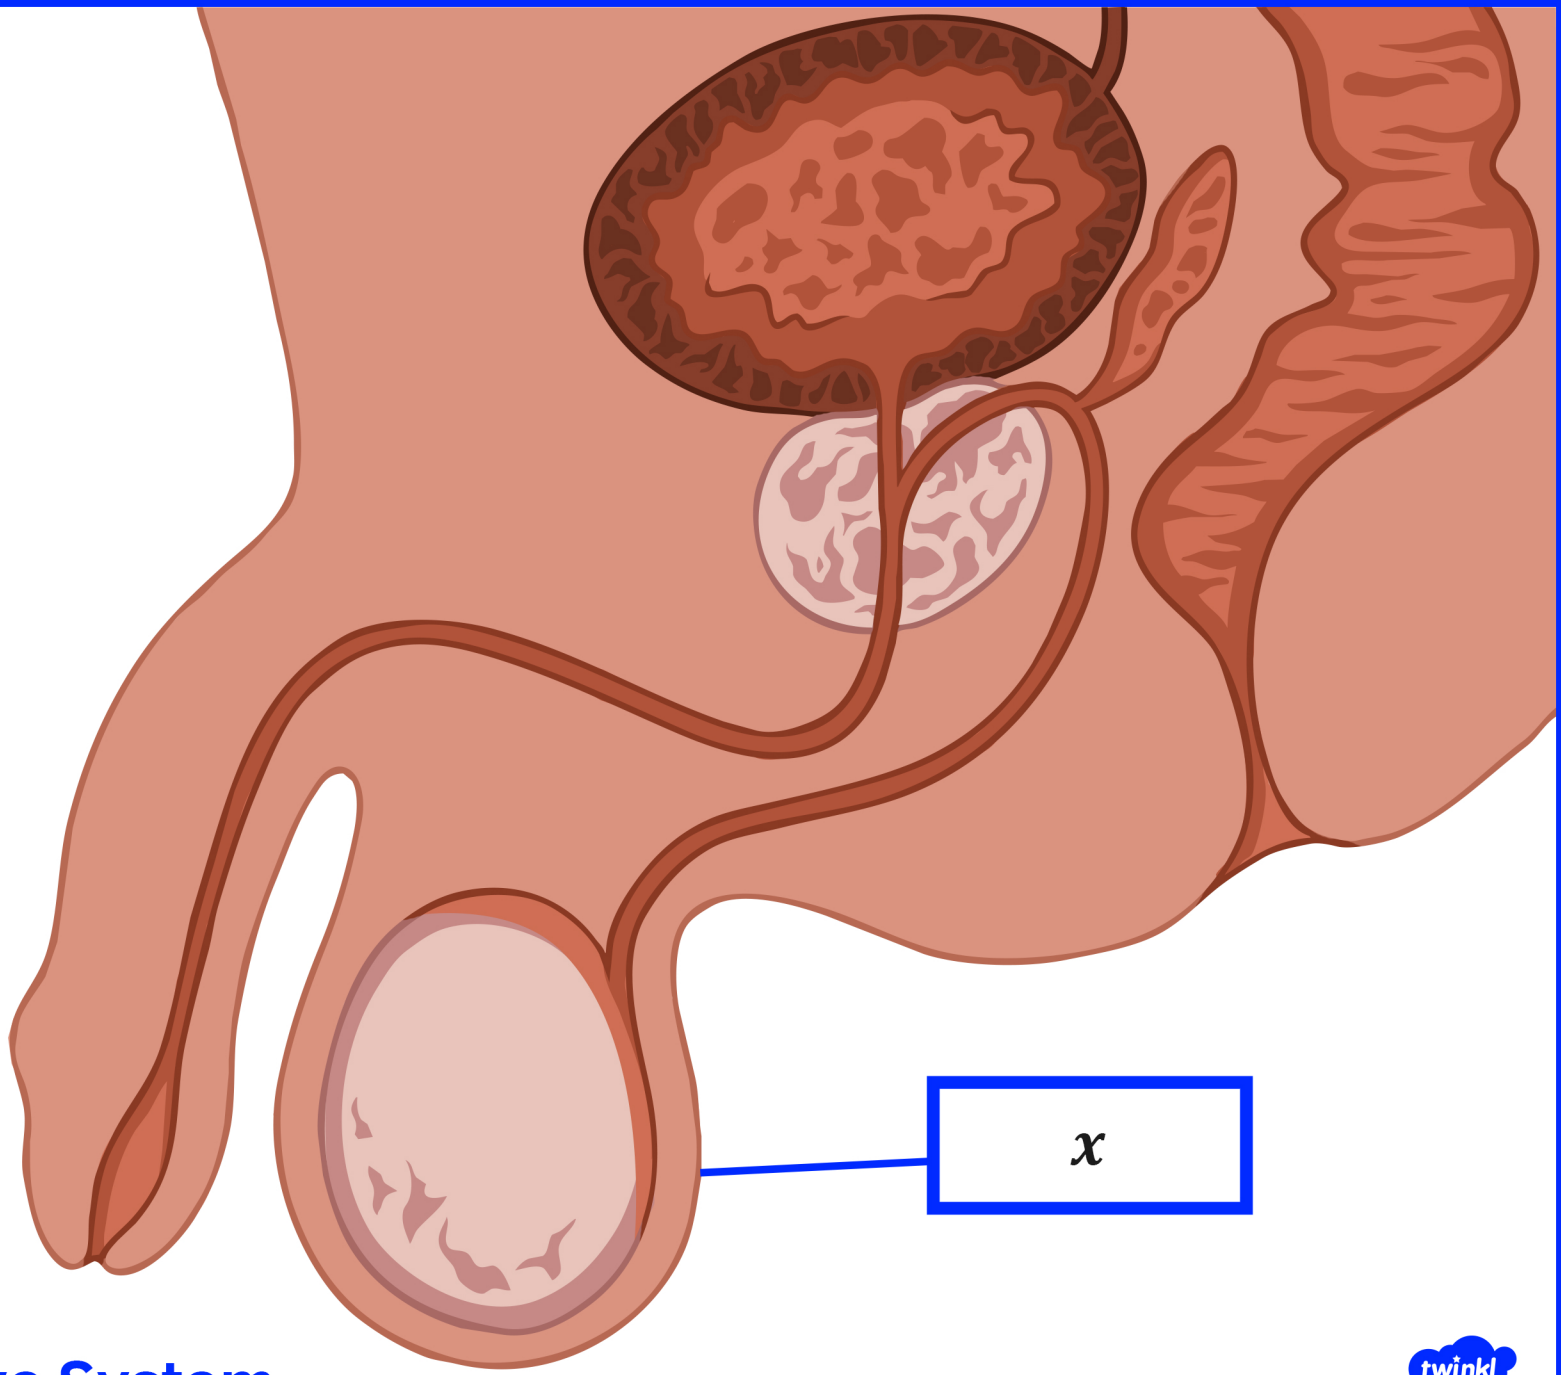


# Male Reproductive System

# Foreskin

# Function:

To protect the end of the penis.

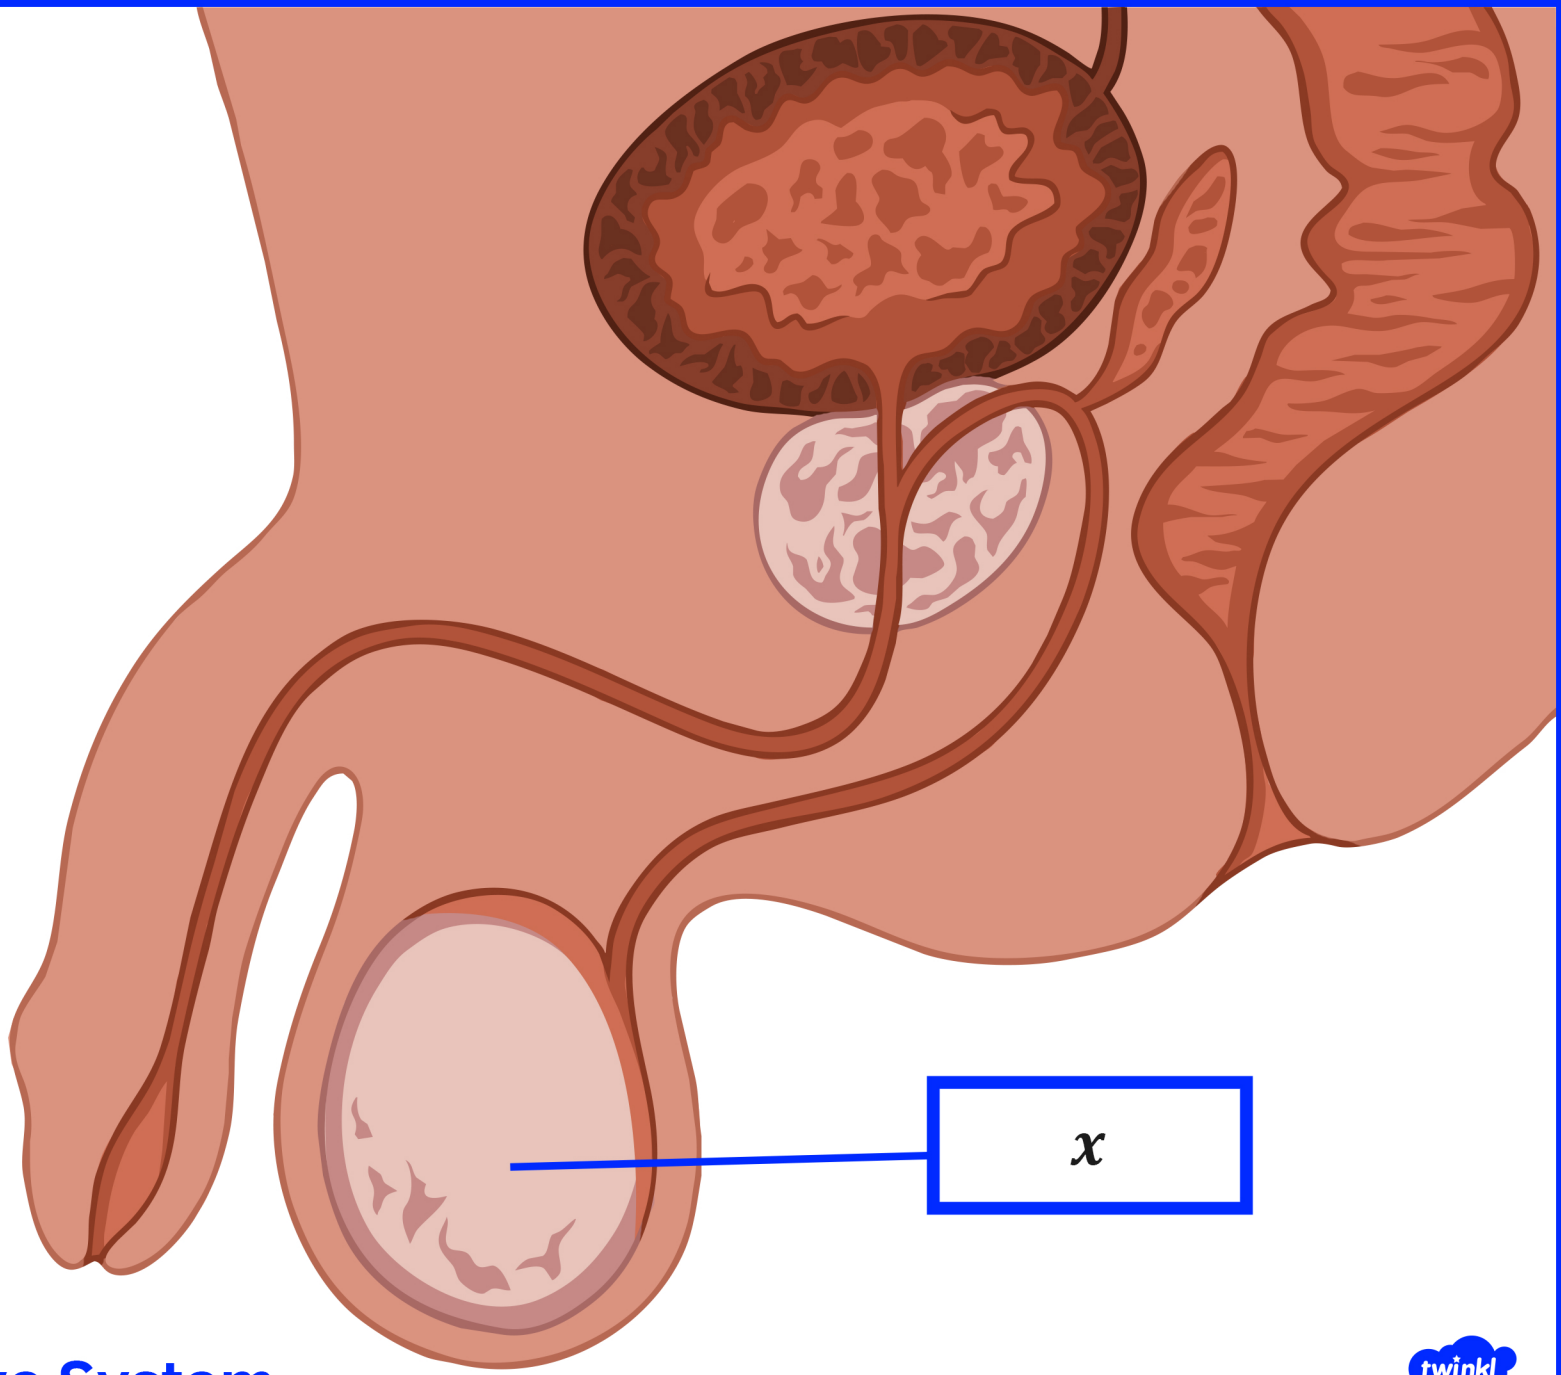


# Male Reproductive System

# Scrotum

# Function:

**This acts as a sack to hold and support the testes outside of the body.**

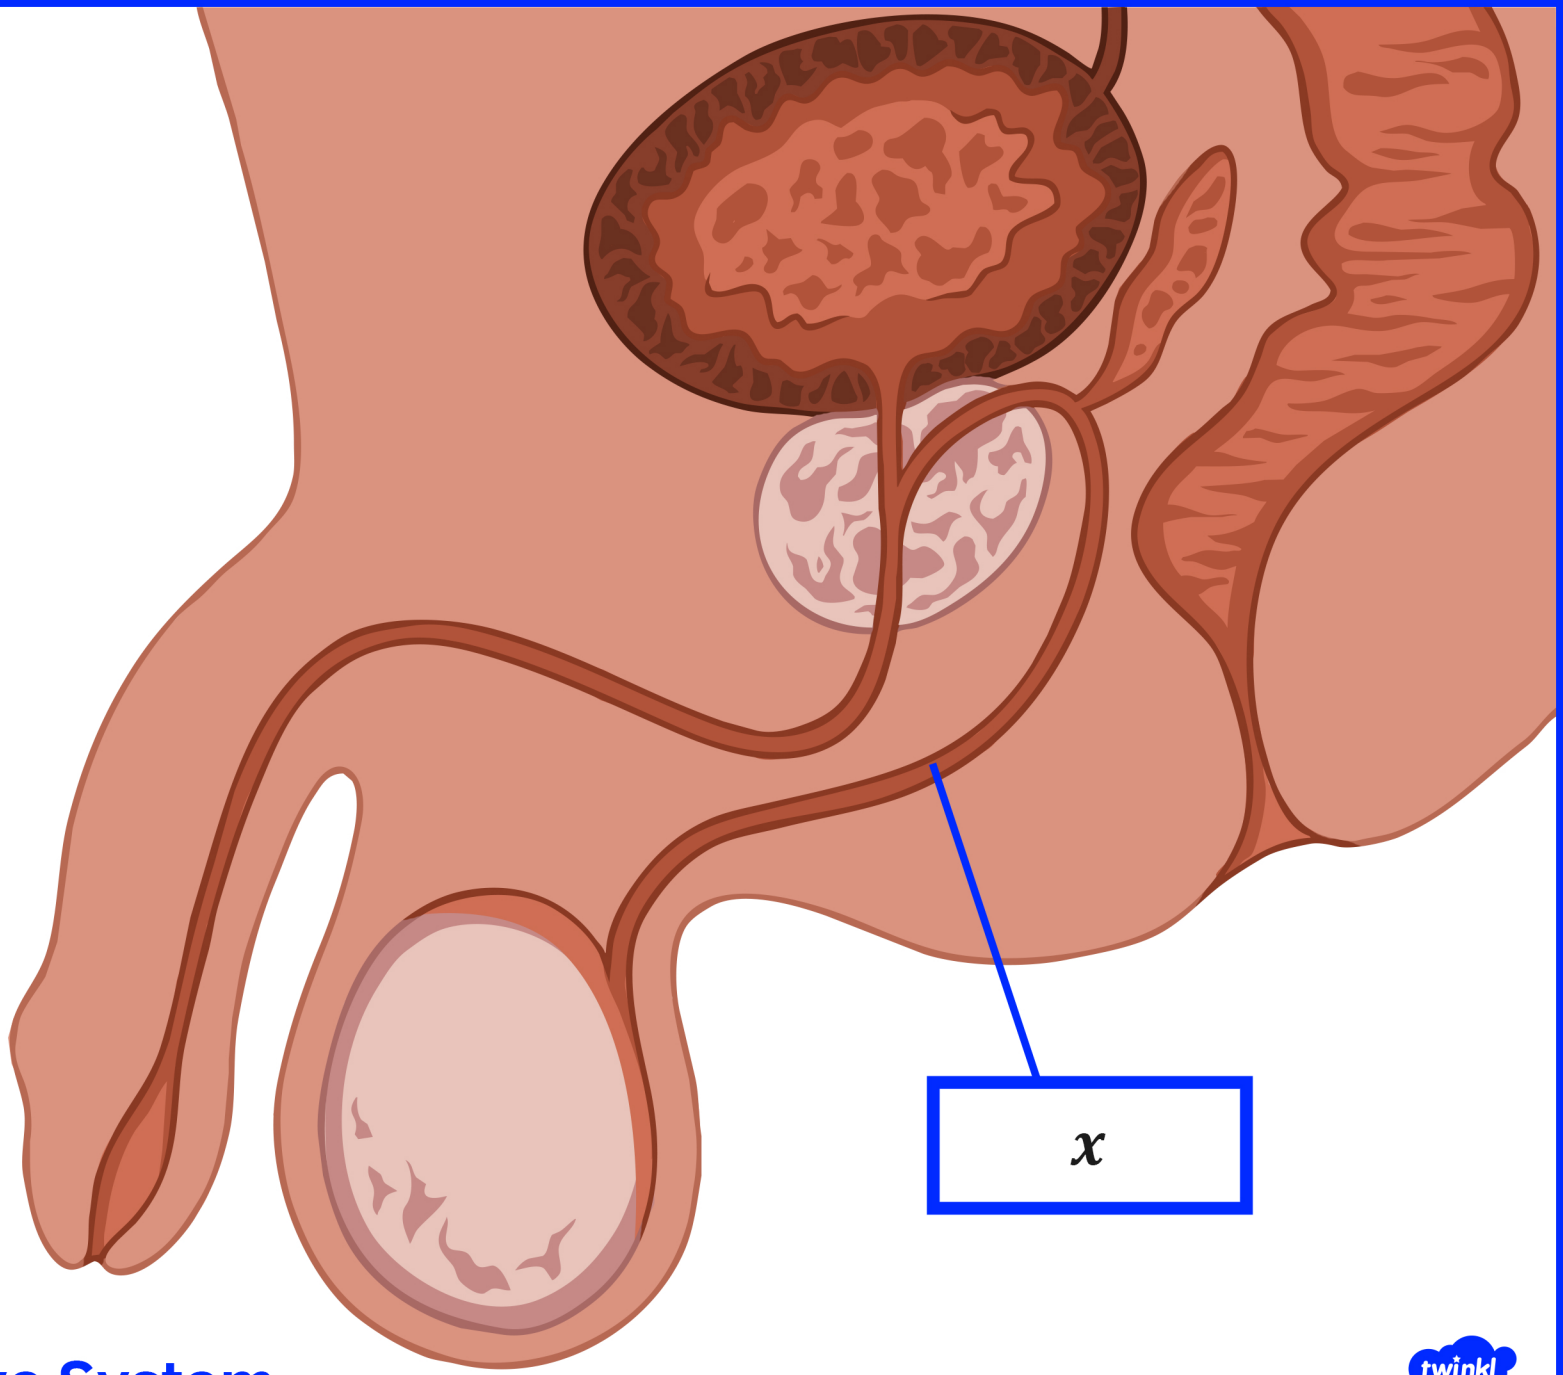


# Male Reproductive System

# Testes

## Function:

Produces millions of male gametes (sex cells) called sperm. Makes male sex hormones (e.g. testosterone) which affect the way a man's body develops.

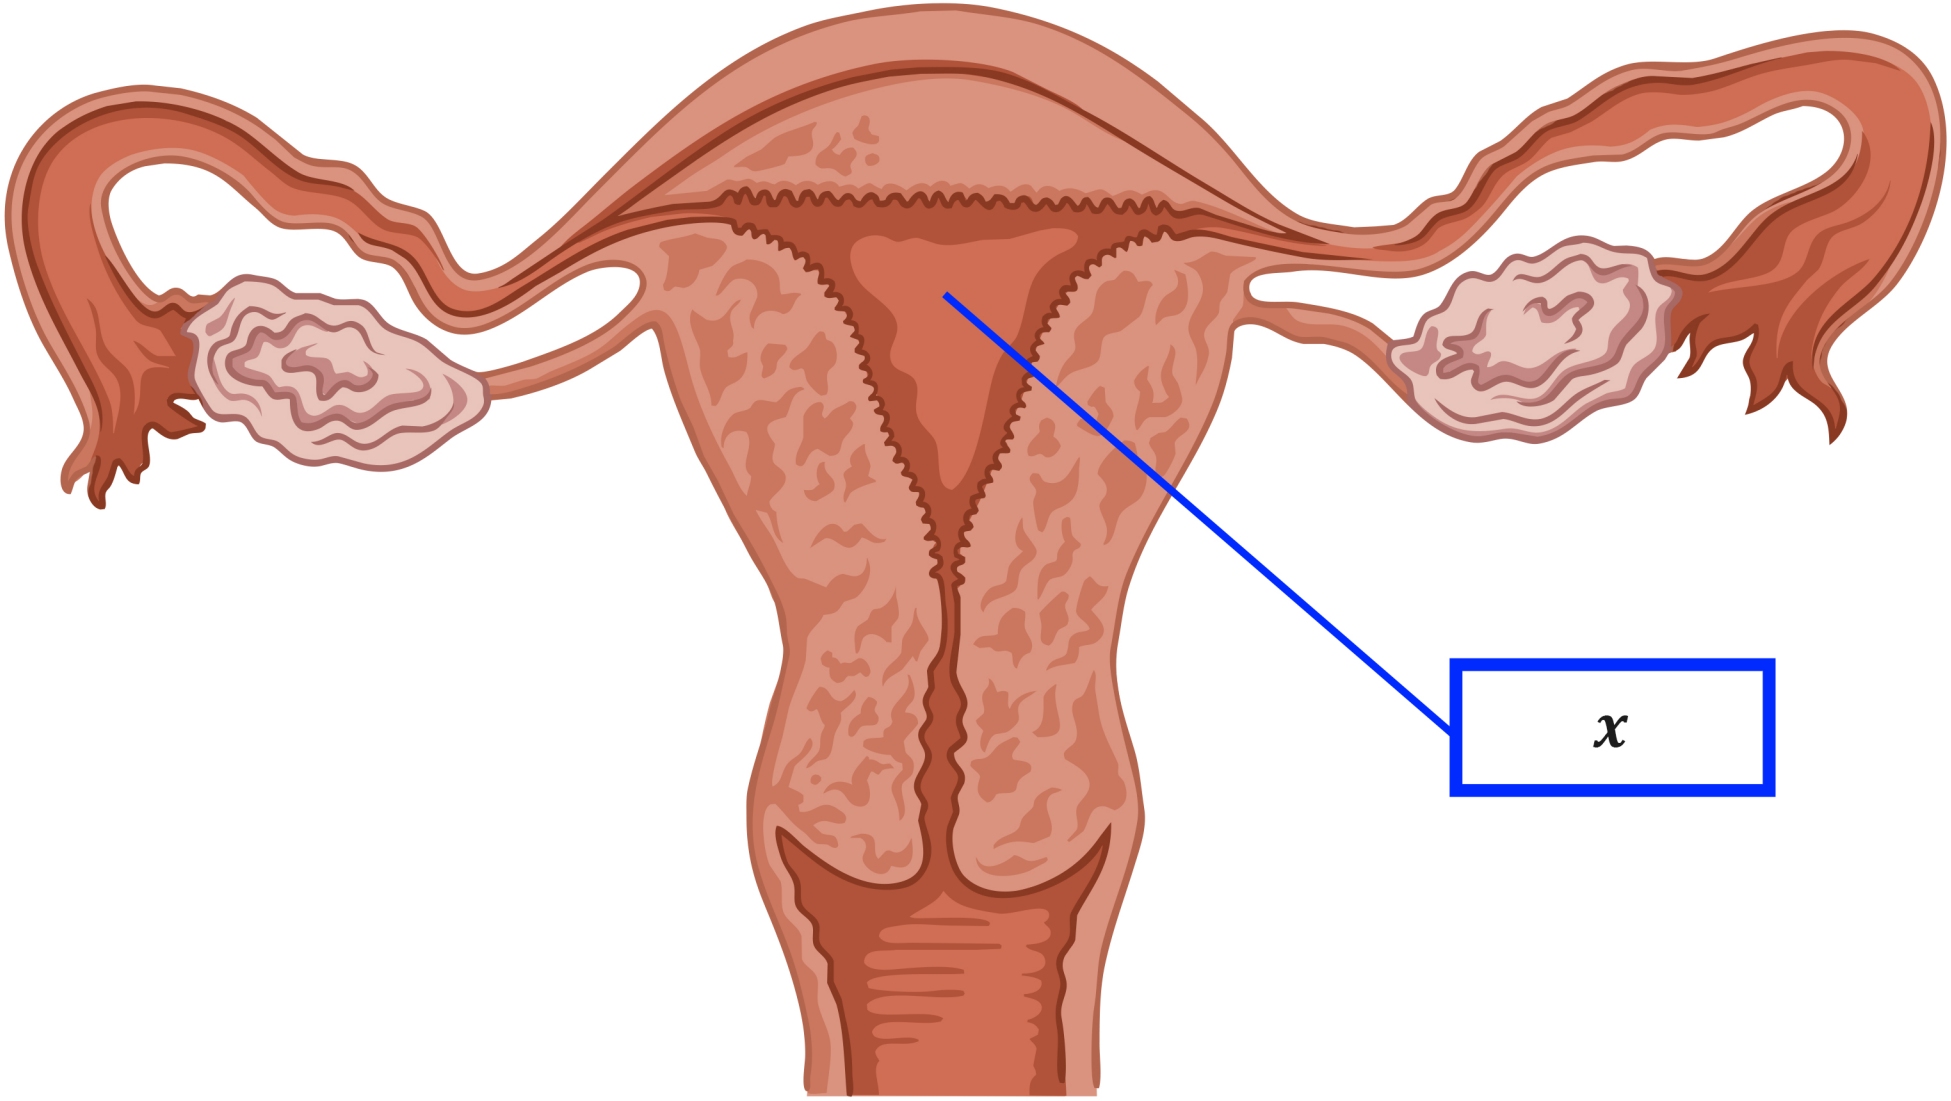


# Male Reproductive System

# Sperm Duct

## Function:

**A tube that carries the sperm cells from the testes to the urethra.**



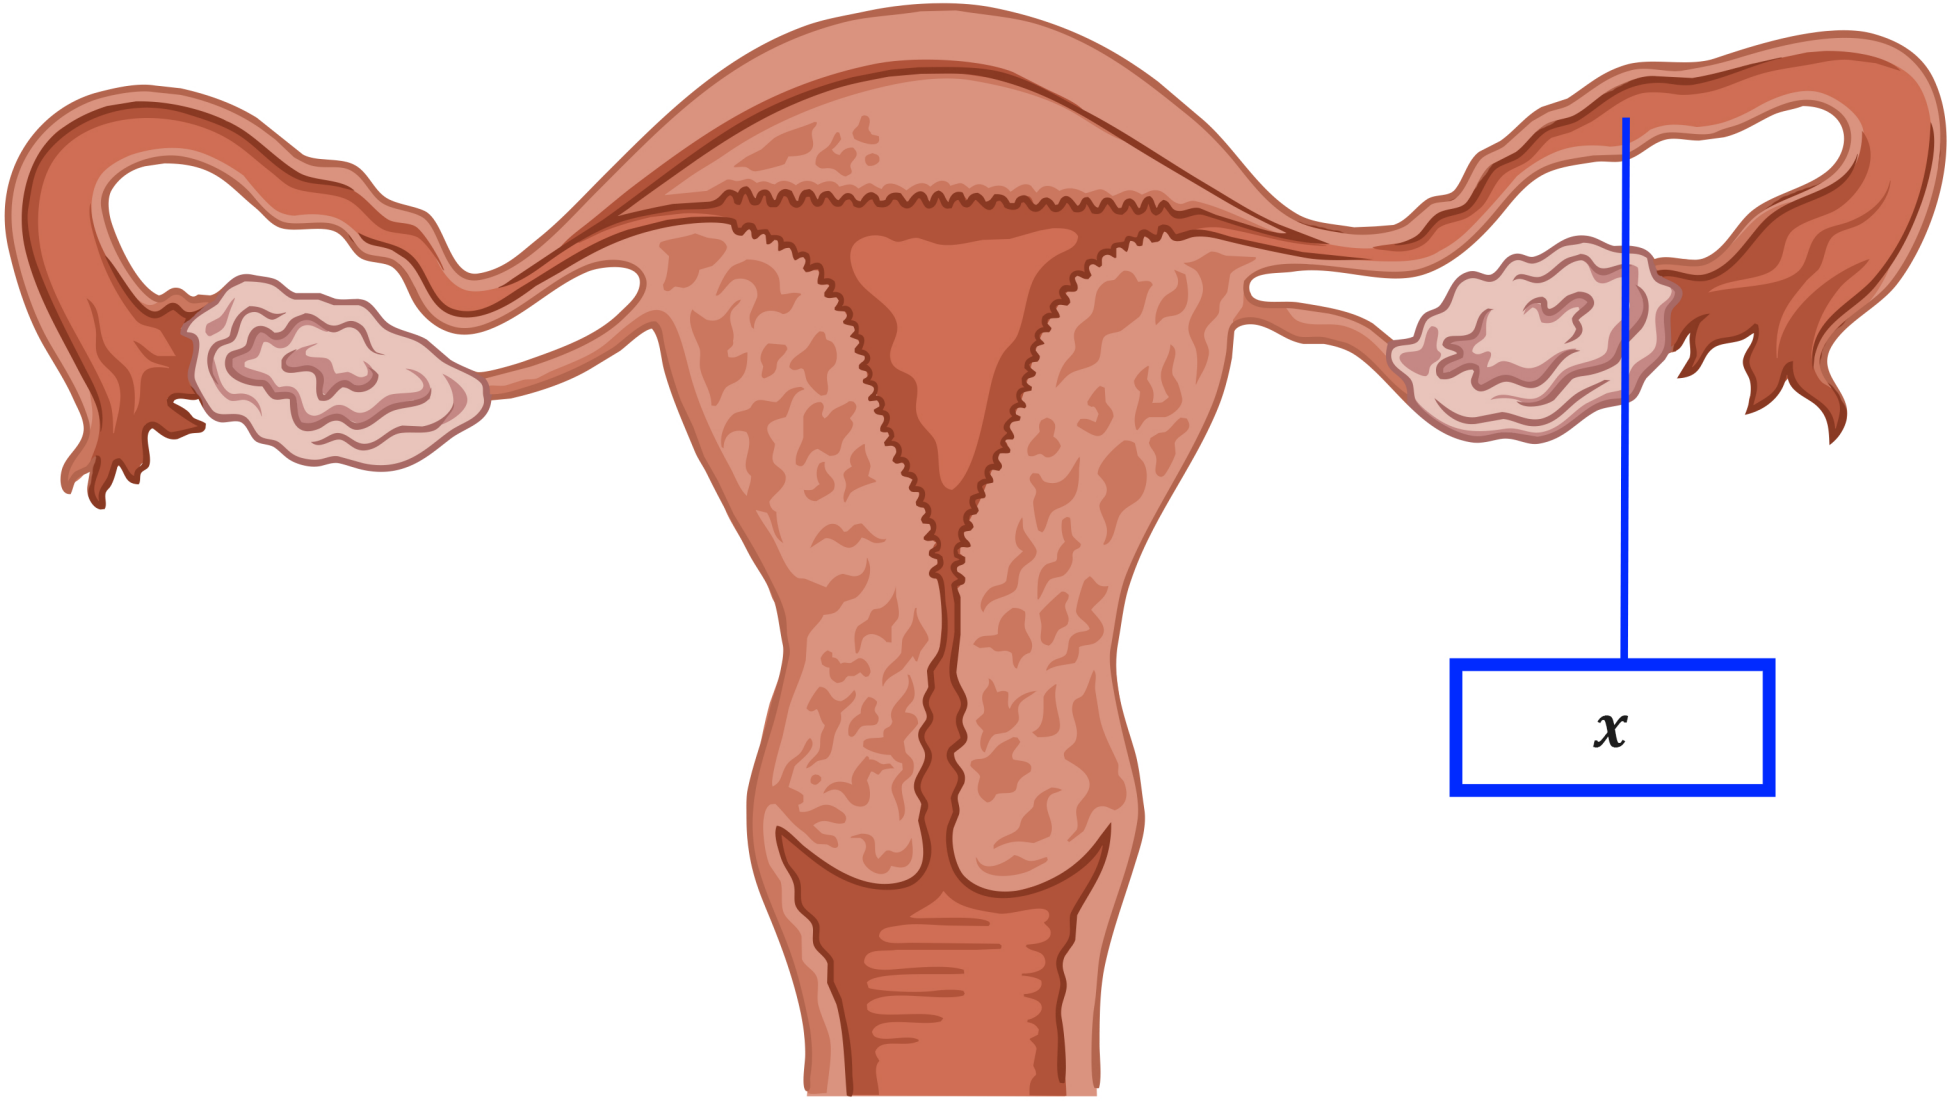
# Female Reproductive System

# Uterus

(womb)

# Function:

A muscular bag with a soft lining. It is where a baby develops until it is born.



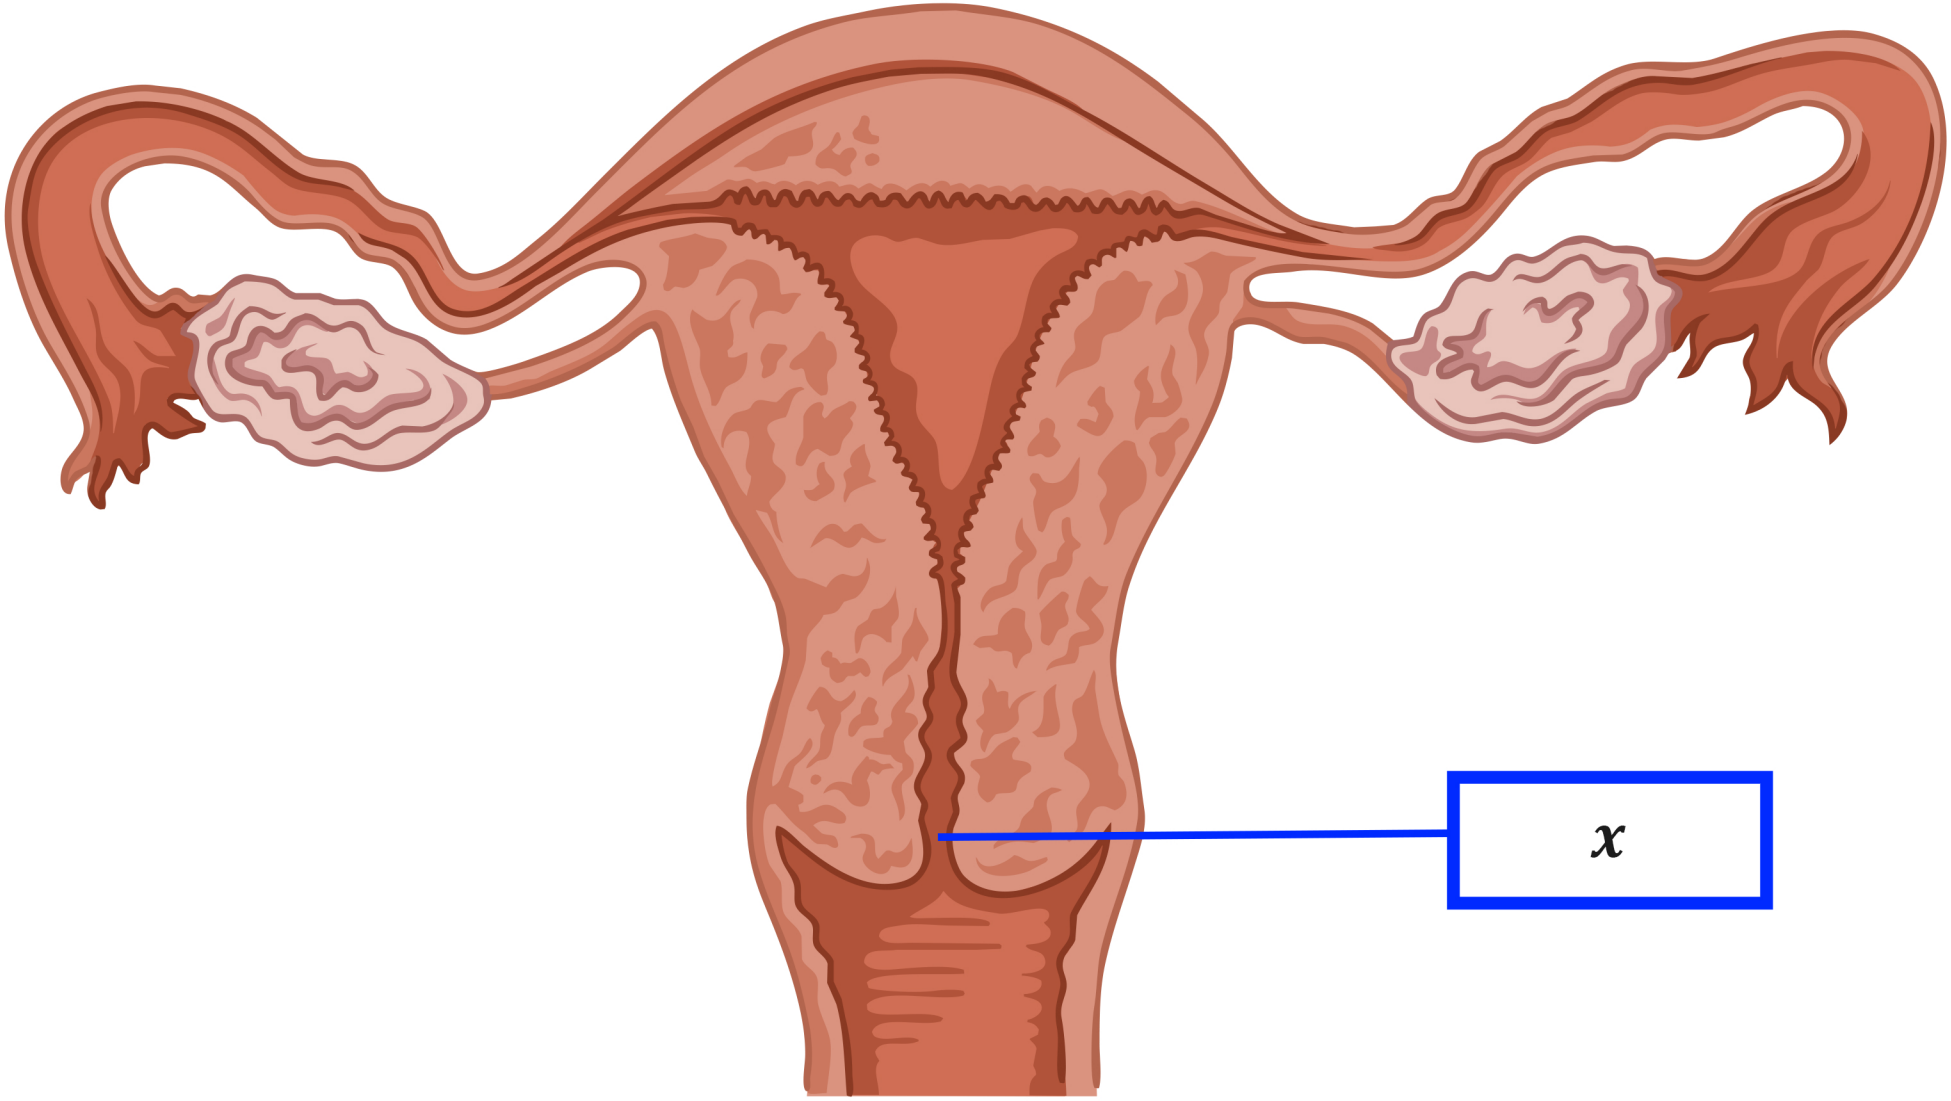
# Female Reproductive System

# Oviducts

(Fallopian Tubes)

# Function:

Tubes that connect each ovary to the uterus.
It is lined with cilia which are tiny hairs on cells. The cilia waft the egg along the tube and into the uterus.

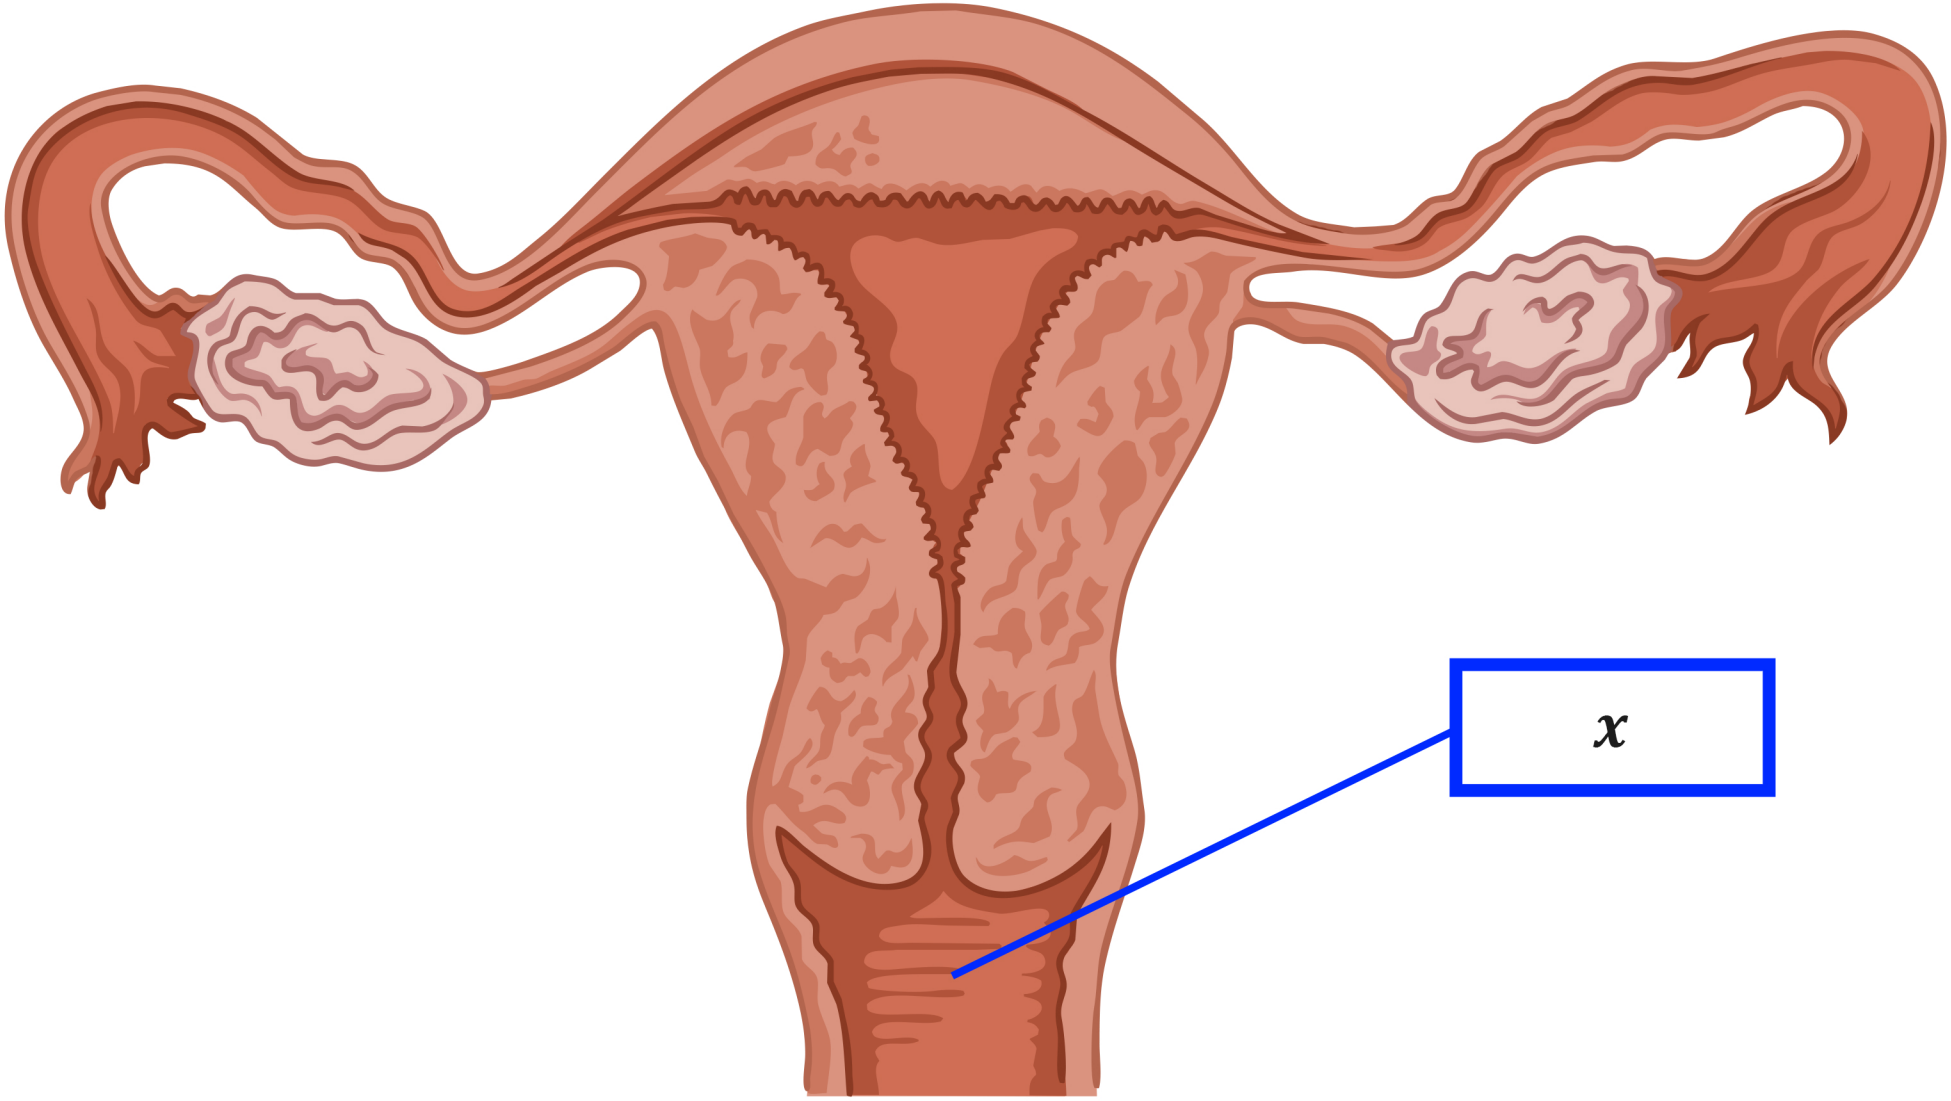


# Female Reproductive System

# Cervix

## Function:

A ring of muscle at the lower end of the uterus. It keeps the baby in place while the woman is pregnant.

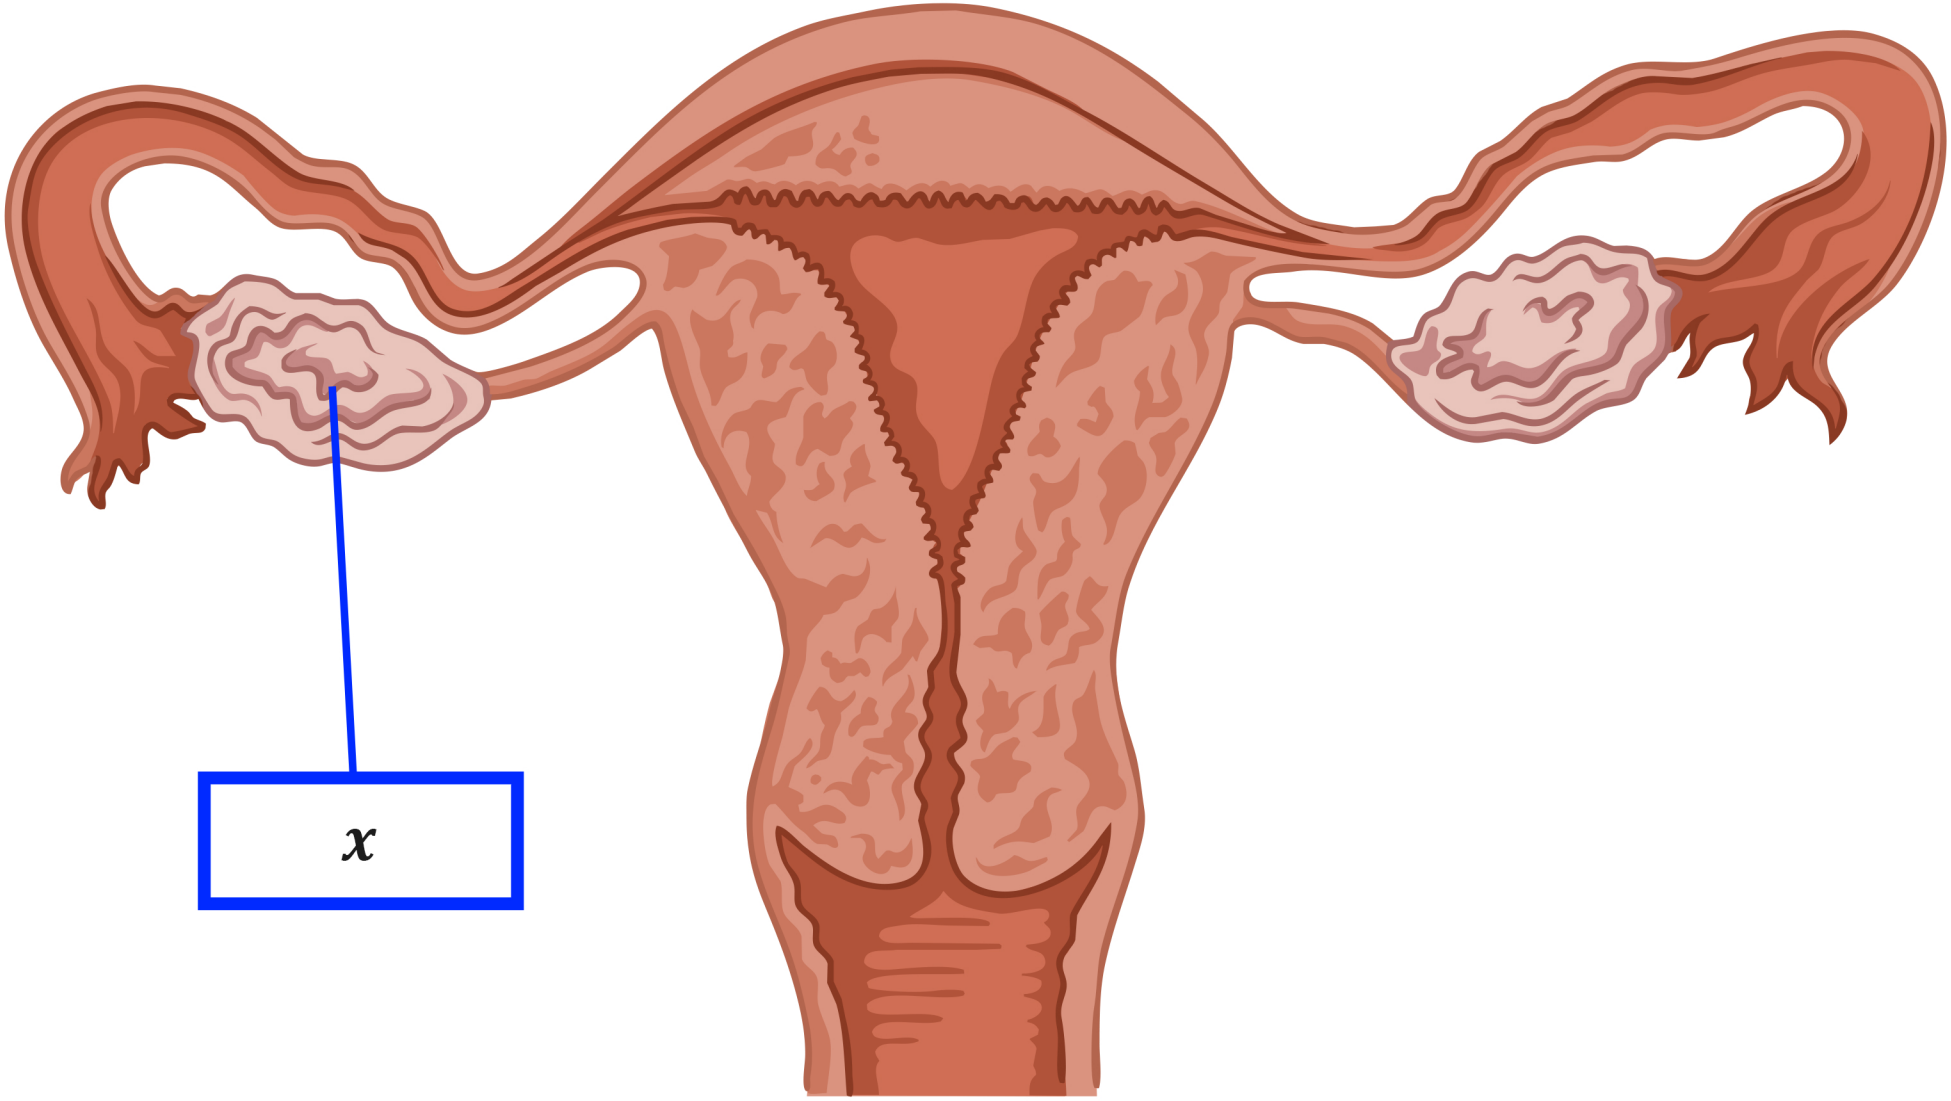


# Female Reproductive System

# Vagina

## Function:

A muscular tube that leads from the cervix to the outside of the woman's body. A man's penis goes into this during sexual intercourse.



# Female Reproductive System

# Ovaries

## Function:

Contain hundreds of undeveloped egg cells. These are called ova. One of them is called an ovum.
