Chemical Reactions **Crossword**

Chemical Reactions **Crossword**

Across

4. A change which transfers energy from the surroundings. [11]

6. A possible source of danger. [6]

7. A substance made of two or more atoms chemically joined together. [8]

9. A change which transfers energy to the surroundings. [10]

11. A chemical _____ shows how many atoms of each elements are in a compound. [7]

12. The resulting substances in a chemical reaction. [8]

15. Type of reaction in which you cannot get back the substances you started with. [12]

16. The starting substances in a chemical reaction. [9]

17. A change in which atoms are rearranged to create a new substance(s). [8,8]

Down

1. When a chemical reaction occurs, _____ is transferred to or from the surroundings. [6]

2. Something used to speed up a chemical reaction. [8]

3. Changes of state and _____ are physical changes. [10]

5. Protective equipment worn in a lab. [6,7]

7. A chemical reaction with oxygen that gives out light and heat. [10]

8. A chemical reaction in which a compound breaks down into simpler parts. [13]

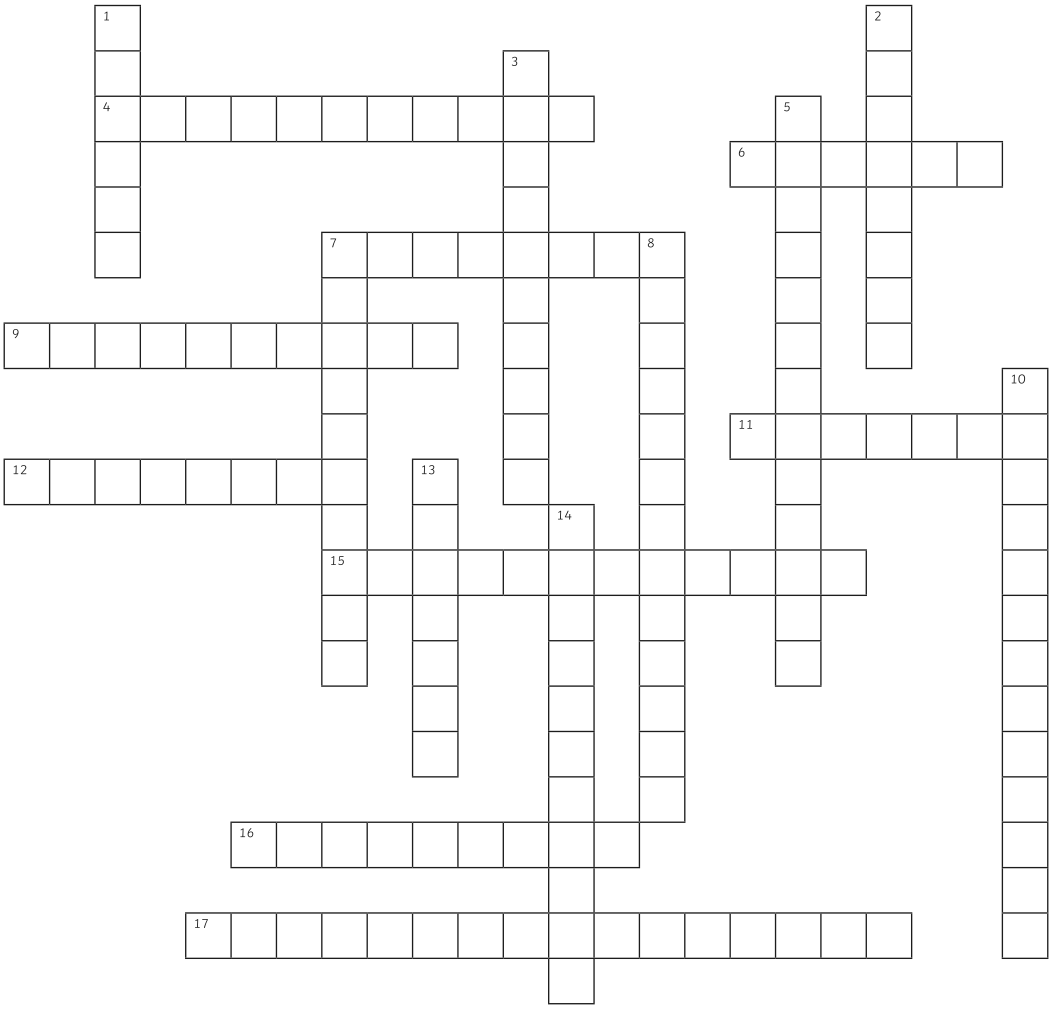

10. The product in this reaction: carbon + oxygen = _____. [6,7]

13. A common name for the reaction described in clue 13. [7]

14. When observing a chemical reaction, you might feel the chemicals change in _____. [11]
