Acids and Alkalis **Crossword**

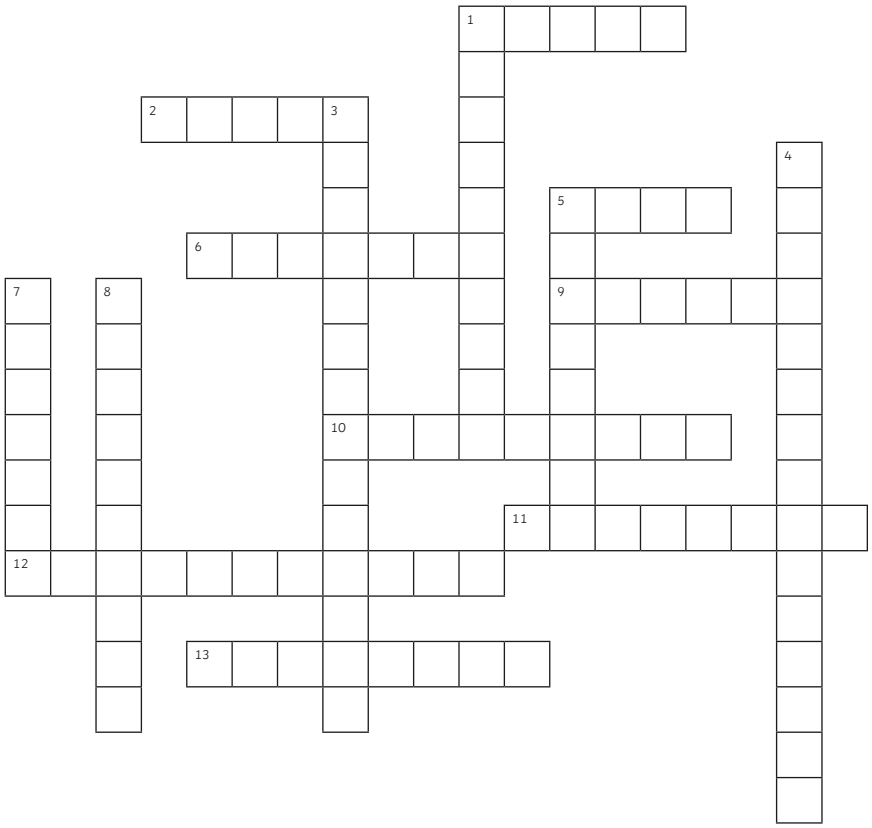

Across

1. A neutralisation reaction also always makes _____. [5]
2. The colour that shows a neutral substance when universal indicator is added. [5]
5. A neutralisation reaction always make a ____. [4]
6. Substances with a pH of 7. [7]
9. Paper indicator that can indicate if a substance is either an acid or an alkali. [6]
10. A substance that changes colour to show acidity or alkalinity. [9]
11. Substances with a pH of 4-6. [4,4]
12. Method of separating the salt and water after a neutralisation reaction. [11]
13. Type of salt made when reacting with hydrochloric acid. [8]

Down

1. Substances with a pH of 8-10. [4,6]
3. A reaction between an acid and an alkali that results in a pH of 7. [14]
4. Process in which salt crystals form. [15]
5. Type of salt made when reacting with sulphuric acid. [8]
7. Type of salt made when reacting with nitric acid. [7]
8. Substances with a pH of 0-3. [6,4]

Acids and Alkalis **Crossword**

neutralisation	crystallisation
green	chloride
nitrate	weak acid
strong acid	indicator
water	litmus
evaporation	strong alkali
weak alkali	sulphate
salt	neutral
