Student Revision Checklist
Acids and Alkalis

For your revision, make sure that you are comfortable with each of the following areas of knowledge.

Recognise hazard symbols.			
Work safely with chemicals and state relevant safety precautions.			
Explain the difference between a dilute and a concentrated solution.			
Name two lab acids and their formulae.			
Write a definition for an indicator.			
Name three different indicators and state how they work.			
Test different solutions for pH and be able to interpret the results.			
Name some household solutions that would be classified as acidic, alkaline or neutral.			
Explain what is meant by neutralisation and describe how to neutralise an acid.			
Predict the salts produced when an acid reacts with a metal or a base.			
Describe the method used to produce copper sulfate crystals from copper oxide and sulfuric acid.
