Food Chain **Cut and Stick Activity**

Easier clues

A caterpillar eats oak leaves.	A rabbit eats grass.
A great tit eats caterpillars.	A fox eats rabbits.
A blue tit eats sunflower seeds or caterpillars.	A hawk eats great tits, blue tits or small rabbits.

More challenging clues

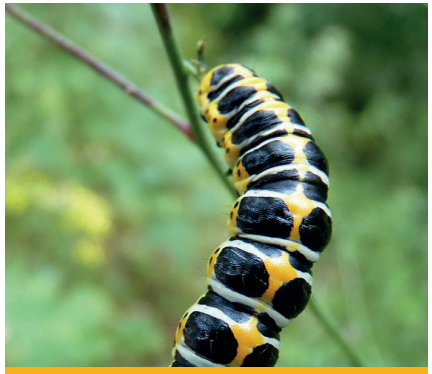

The oak tree's leaves are eaten by the caterpillar.	Smalls birds eat fruits, berries, seeds, insects and tiny animals.
Hawks feed on smaller birds and mammals.	A fox is a predator.
Rabbits are preyed upon by foxes and hawks.	A hawk is an example of a bird of prey.
Rabbits are herbivores and feed from the ground.	Plants are typically producers, using energy from the sun to make their own food.

Food Chain **Cut and Stick Activity**

Cut out and match the labels to the parts of this food chain.

oak tree

caterpillar

blue tit

hawk

producer

prey

prey

predator

predator

herbivore

omnivore

carnivore

primary consumer

secondary consumer

tertiary consumer

Food Chain **Cut and Stick Activity**

Read the clues and then arrange the organisms into a food web.

Connect your food web with the arrows. Remember – the arrows show the **flow of energy.**

oak tree

caterpillar

great tit

hawk

blue tit

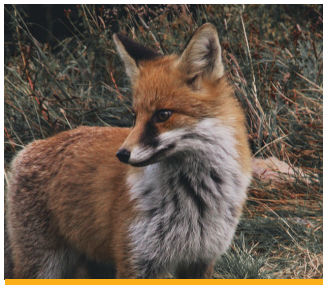

sunflower

rabbit

grass

fox

Trophic Levels **Cut and Stick Activity**

Cut out the organisms below and sort them into their trophic levels. Use your food web to help you!

Some organisms may appear in more than one trophic level so you can choose where to put these!

oak tree

caterpillar

great tit

hawk

blue tit

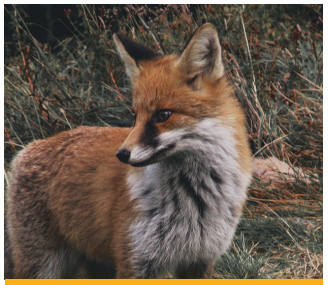

sunflower

rabbit

grass

fox

Trophic Levels **Cut and Stick Activity**

Sort the organisms into their trophic levels. Use your food web to help you!

Tertiary consumers (4th trophic level)	
Secondary consumers (3rd trophic level)	
Primary consumers (2nd trophic level)	
Producers (1st trophic level)	

Food Chain **Cut and Stick Activity Answers**

Cut out and match the labels to the parts of this food chain.

great tit

Trophic Levels **Cut and Stick Activity Answers**

Sort the organisms into their trophic levels. Use your food web to help you!

Note to teacher – Students may place hawk and blue tit in a different trophic level depending on which food chain they follow.

Tertiary consumers (4th trophic level)	 hawk  fox
Secondary consumers (3rd trophic level)	 great tit  blue tit
Primary consumers (2nd trophic level)	 caterpillar  rabbit
Producers (1st trophic level)	 oak tree  sunflower  grass
