The Periodic Table

transition metals	This subatomic particle has a negative charge.

electron	This subatomic particle has a positive charge.

proton	This subatomic particle has no charge.

neutron	This is where the protons and neutrons are found.

nucleus	This is where the electrons are found in an atom.

electron shell	The number of protons in an element.

atomic number	The number of protons and neutrons in an element.

atomic mass	Electrons, protons and neutrons are collectively known as...

twinkl.co.uk

subatomic particles	This contains all the elements divided into columns and rows.

twinkl.co.uk

Periodic Table	This person put together the modern day Periodic Table.

twinkl.co.uk

Mendeleev	These are found on the Periodic Table and contain one type of atom.

twinkl.co.uk

element	The columns on the Periodic Table are called this.

twinkl.co.uk

groups	The rows on the Periodic Table are called this.

twinkl.co.uk

periods	Elements are grouped according to these being similar.

twinkl.co.uk

properties	Elements are arranged in _____ according to their atomic number.

twinkl.co.uk

ascending order	Generally found on the left hand side of the Periodic Table.

twinkl.co.uk

metals	Found on the right hand side of the Periodic Table.

twinkl.co.uk

non-metals	This is the only liquid metal found on the Periodic table.

twinkl.co.uk

Mercury	How we identify each element in a shortened form.

twinkl.co.uk

chemical symbol	This group has a full outer shell of electrons.

twinkl.co.uk

group 0 (Noble gases)	This is the number of electrons found on the first (inner) shell.

twinkl.co.uk

2	These metals are found in the middle part of the Periodic Table.

twinkl.co.uk

The Periodic Table **Answers**

This subatomic particle has a negative charge	electron
This subatomic particle has a positive charge	proton
This subatomic particle has no charge	neutron
This is where the protons and neutrons are found	nucleus
This is where the electrons are found in an atom	electron shell
The number of protons in an element is this	atomic number
The number of protons and neutrons in an element is this	atomic mass
Electrons, protons and neutrons are collectively known as this	sub atomic particles
This contains all the elements divided into columns and rows	Periodic Table
This person put together the modern day Periodic Table	Mendeleev
These are found on the Periodic Table and contain one type of atom	element
The columns on the Periodic Table are called this	group
The rows on the Periodic Table are called this	period
Elements are grouped according to these being similar	properties
Elements are also put in order according to the protons doing this	ascending order
Generally found on the left hand side of the Periodic Table	metals
Found on the right hand side of the Periodic Table	non metals
This is the only liquid metal found on the Periodic table	Mercury
This is how we identify each element (even if in a different country)	chemical symbol
This group has a full outer shell of electrons	group 8 (group 0)
This is the number of electrons found on the first (inner)shell	2
These metals are found in the middle part of the Periodic Table	transition metals
