Describe:

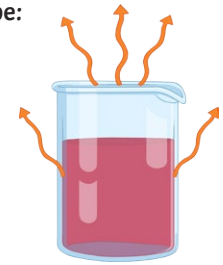

catalyst

without using the words:

1. change
2. rate
3. reaction
4. remain
5. same

Describe:

reaction

without using the words:

1. chemical
2. change
3. reversible
4. irreversible
5. physical

Describe:

H_2O

chemical formula

without using the words:

1. amount
2. chemical symbol
3. number
4. element
5. compound

Describe:

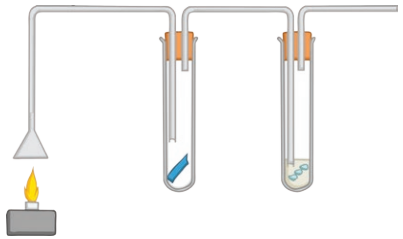

$Fe_3O_4 + H_2 \rightarrow Fe + H_2O$

equation

without using the words:

1. formula
2. reaction
3. model
4. reactants
5. products

Describe:

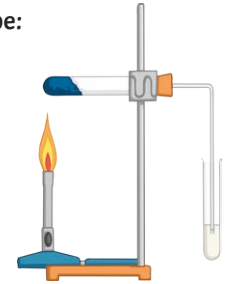

combustion

without using the words:

1. heat
2. burn
3. fire
4. pollution
5. fossil fuels

Describe:

thermal decomposition

without using the words:

1. heat
2. break down
3. chemical
4. reaction
5. product

Describe:

$Fe_2O_3 + 3CO \rightarrow 2Fe + 3CO_2$

Oxidation

oxidation

without using the words:

1. oxygen
2. reaction
3. gain
4. lose electrons
5. chemical

Describe:

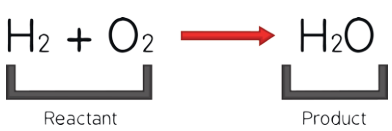

$A + BC \rightarrow B + AC$

displacement

without using the words:

1. remove
2. bump
3. reduction
4. oxidation
5. change

Describe:

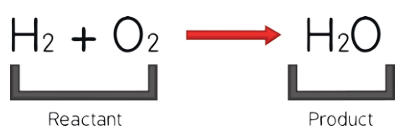

reactant

without using the words:

1. substance
2. chemical
3. reaction
4. equation
5. product

Describe:

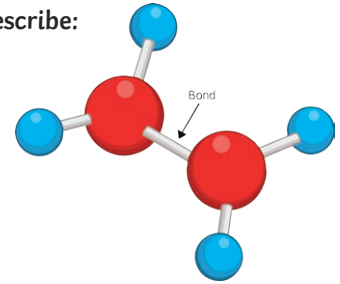

product

without using the words:

1. formed
2. reactant
3. equation
4. reaction
5. chemical

Describe:

bond

without using the words:

1. chemical
2. link
3. hold
4. molecules
5. together

Describe:

acid

without using the words:

1. corrosive
2. substance
3. pH
4. hydrogen ion
5. alkali

Describe:

endothermic

without using the words:

1. reaction
2. takes in
3. energy
4. surroundings
5. temperature fall

Describe:

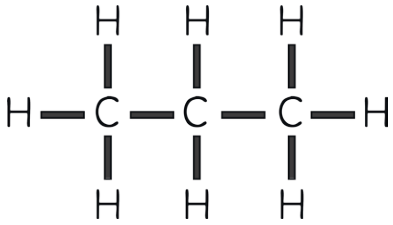

exothermic

without using the words:

1. reaction
2. energy
3. given out
4. surrounding
5. temperature increase

Describe:

hydrocarbon

without using the words:

1. substance
2. hydrogen
3. carbon
4. fuel
5. energy

Describe:

alkali

without using the words:

1. acid
2. pH
3. opposite
4. purple
5. neutralise
