Recycling

1. Circle the man-made resources below. [1]

plastic	wool	wood
brick	metal	paper
stone	oil	coal

2. Match the natural resources to their sources on Earth. [5]

stone	animals
wool	metal ores undeground
oil	quarries and mines
metal	drilling (often at sea)
wood	cutting down trees
coal	underground mines

3. Give three advantages of recycling. [3]

The data in the table below shows the energy savings that can be made by recycling a resource rather than sourcing new material.

Material	Energy Saving
Aluminium	95%
Plastic	70%
Steel	60%

4. Draw a graph to show the data from the table. Use the graph paper overleaf. [10]

   You should:

   - Include a title;
   - Use suitable headings (including units);
   - Use appropriate scales;
   - Plot the data accurately;
   - Use a pencil and ruler;
   - Draw a line of best fit (where appropriate);
   - Use an appropriate type of graph: Continuous data (line graph)/Discrete data (bar graph).

Learning Outcomes (tick if achieved)

Q1,2	I know where different materials come from	
Q3	I can describe advantages for recycling materials	
Q4	I can present scientific data in a suitable graph

Recycling **Answers**

1. Circle the man-made resources below. [1]

plastic	wool	wood
brick	metal	paper
stone	oil	coal

2. Match the natural resources to their sources on Earth. [5]

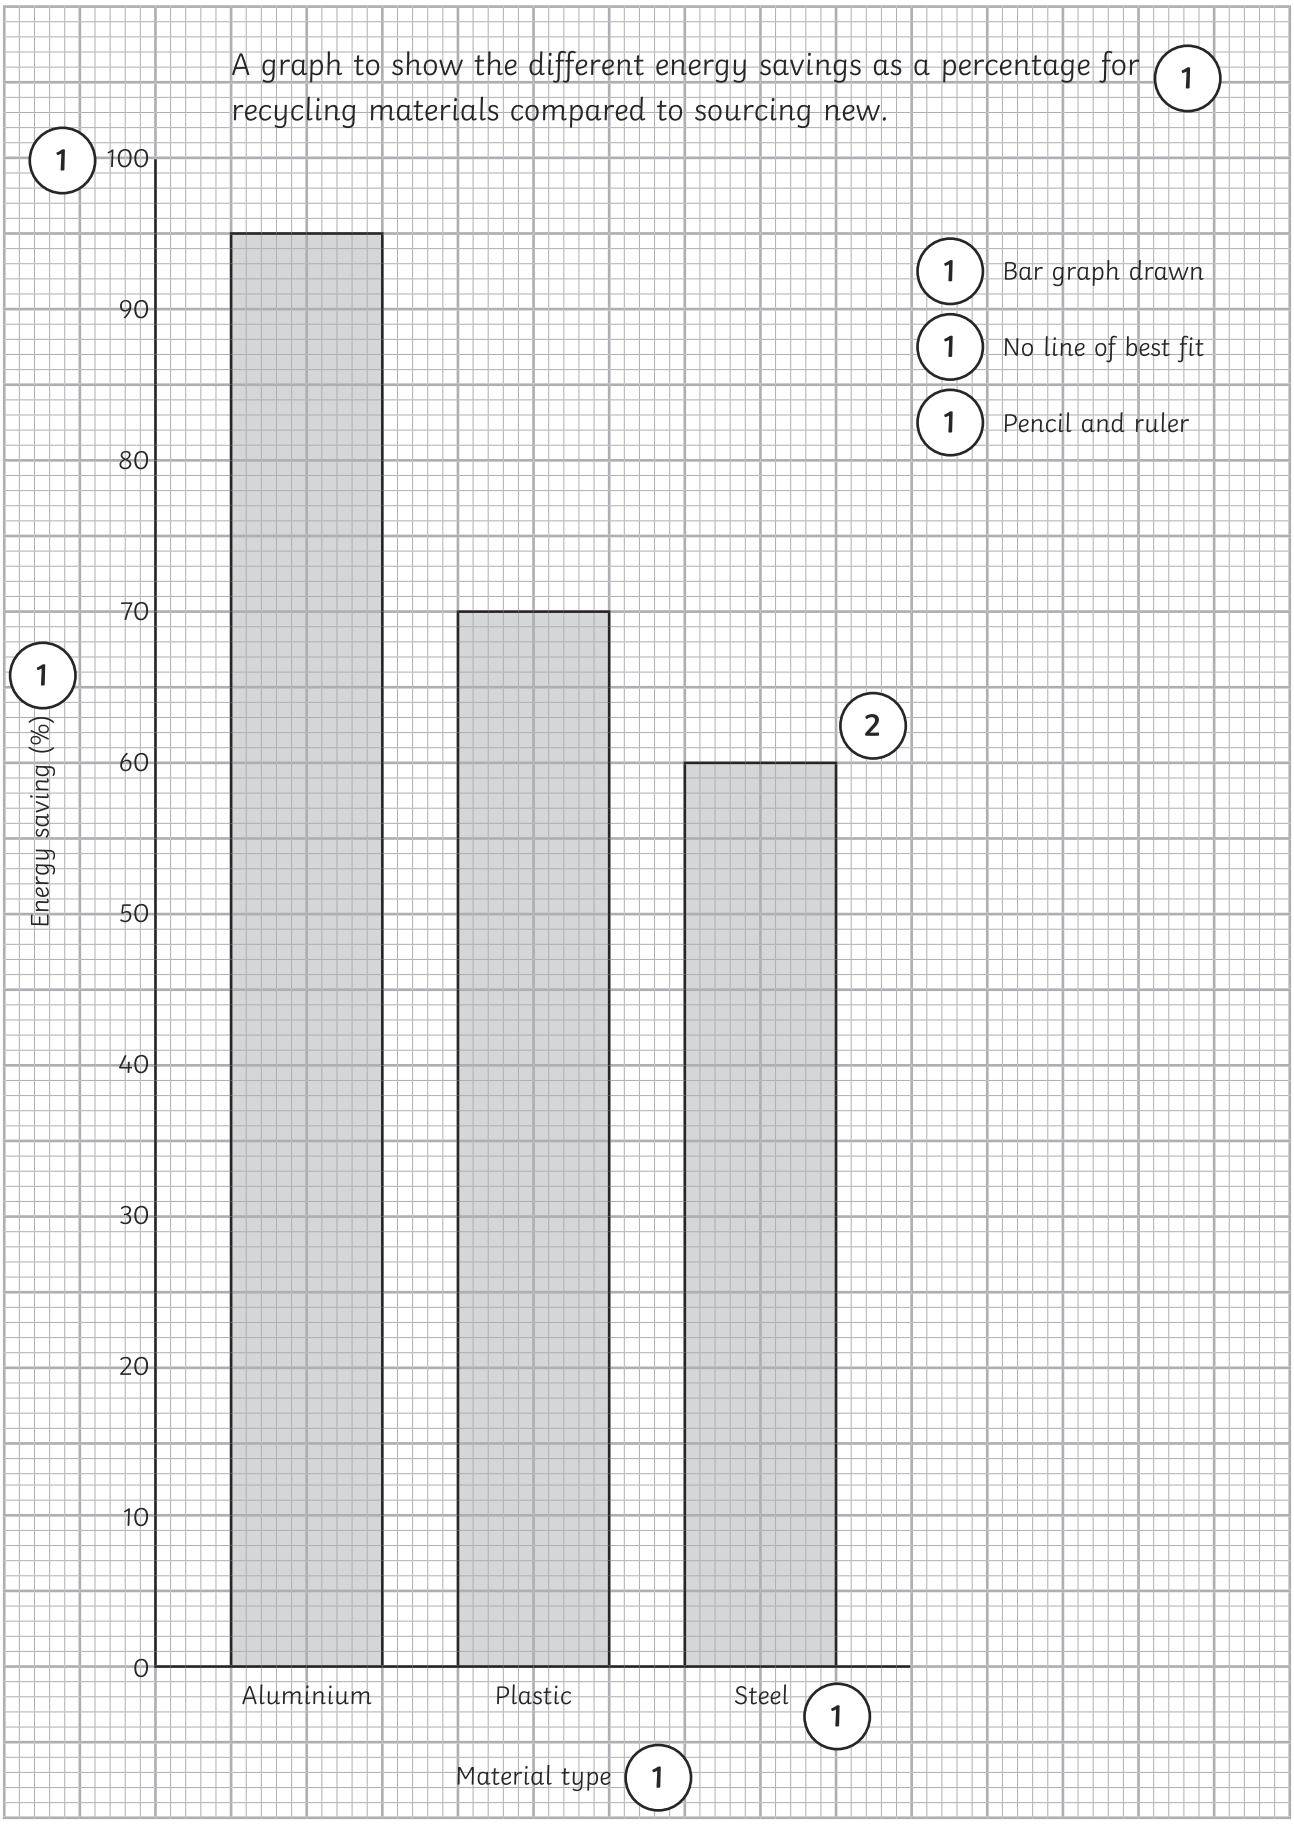

3. Give three advantages of recycling. [3]

Resources are limited; good to use less
Uses less energy
Fewer fossil fuels burnt
Less pollution / CO_2 emissions
Saves money
Less rubbish to landfills
More efficient (in terms of cost and energy)

4. Draw a graph to show the data from the table. [10]

- Include a title. **[1 mark]**
- Use suitable headings (including units). **[1 mark for each axis]**
- Use appropriate scales. **[1 mark for each axis]**
- Plot the data accurately. **[1 mark for 1-2, 2 marks for all]**
- Use a pencil and ruler. **[1 mark]**
- Draw a line of best fit (where appropriate). **[1 mark if NOT drawn - not appropriate in this context]**
- Use an appropriate type of graph. **[1 mark] The graph should be a bar graph with space between the bars as the data for each material is not dependent on another.**

A graph to show the different energy savings as a percentage for recycling materials compared to sourcing new. 1

1 Bar graph drawn

1 No line of best fit

1 Pencil and ruler
