Energy **Changes**

1. List all the forms of energy you can see in the image. [5]

twinkl.co.uk

2a. What form of energy does the rollercoaster car have when it is stationary at the top of the track? [1]

_____

2b. What form of energy will it have as it rides down the slope? [1]

_____

2c. What forms of energy will this transfer to when the brakes are applied? [2]

_____

3a. Circle the odd one out from the stores of energy listed below. [1]

A Battery

B Diesel fuel

C Candle wax

D Jack-in-a-box spring

3b. What form of energy is stored in the odd one out? [1]

_____

3c. What form of energy is stored in the other three? [1]

_____

Learning Outcomes (tick if achieved)

Q1	I can identify a range of energy forms	
Q2	I can identify transformations of energy in an object	
Q3	I can identify different types of energy stores	

twinkl.co.uk

Energy Changes **Answers**

1. List all the forms of energy you can see in the image [5].

1 mark for each type of energy with correct example, up to 5

- **Gravitational potential - aeroplane in air**
- **Kinetic energy – aeroplane in air**
- **Electrical energy – flight notice boards**
- **kinetic energy - people walking / pulled suitcases**
- **Light energy – from sun / airport lighting**
- **Chemical energy – fuel for aeroplane**
- **Sound energy – people talking**

2a. What form of energy does the roller coaster car have when it is stationary at the top of the track? [1]

Gravitational potential energy

2b. What form of energy will it have as it is riding down the slope? [1]

Kinetic energy / sound energy

2c. What forms of energy will this transfer to when the brakes are applied? [2]

Sound energy / heat energy

3a. Circle the odd one out from the stores of energy listed below. [1]

A Battery

B Diesel fuel

C Candle wax

D Jack-in-a-box spring

3b. What form of energy is stored in the odd one out? [1]

Elastic potential energy

3c. What form of energy is stored in the other three? [1]

Chemical energy
