Reflection of **Light Rays**

1. Draw the reflected ray in each diagram. [6]

2. Complete the sentences by adding an appropriate word into each gap. [7]

The angle of incidence is always _____ to the angle of reflection, when the light is _____ off a _____ surface. This type of reflection makes a _____ image, e.g. a mirror.

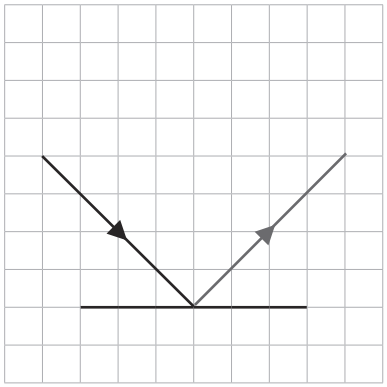

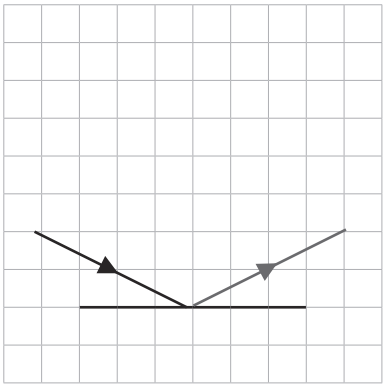

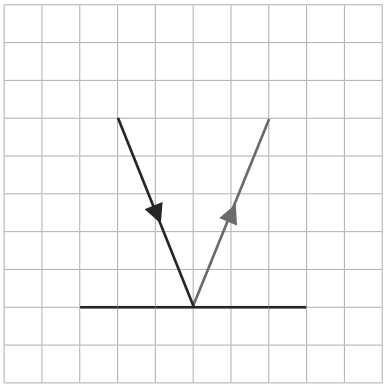

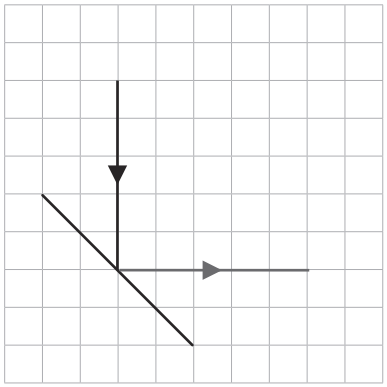

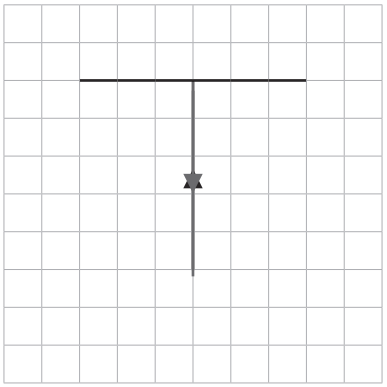

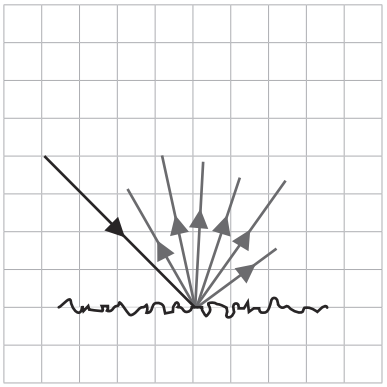

If the light is reflected off a _____ surface, then it will be _____ in all directions. This type of reflection makes a _____ image.

Learning Outcomes (tick if achieved)

Q1		
Q2		

Reflection of Light Rays **Answers**

1. Draw the reflected ray in each diagram. [6]

2. Complete the sentences by adding an appropriate word into each gap. [7]

The angle of incidence is always **equal** to the angle of reflection, when the light is **reflected** off a **smooth** surface. This type of reflection makes a **clear** image, e.g. a mirror.

If the light is reflected off a **rough** surface, then it will be **scattered** in all directions. This type of reflection makes a **distorted** image.
