# Pet Rock **Care Guide**

Complete the boxes on the sheet to create a care guide for your own pet rock. You can draw one or make one at home and take a photo. You will need to use your knowledge and learning about the rock cycle, rock formation, and the erosion and weathering processes.

## Fact file

Type of rock (tick one):

- ☐ sedimentary
- ☐ igneous
- ☐ metamorphic

Identifying features:

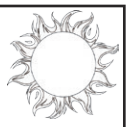

Caring for your pet rock... when it's raining.

**Risks to your pet rock:**

**How to keep it safe:**

Caring for your pet rock... at the seaside.

**Risks to your pet rock:**

**How to keep it safe:**

Caring for your pet rock... during the winter.

**Risks to your pet rock:**

**How to keep it safe:**

# Pet Rock Care Guide **Answers**

The ideas given on the answer sheets are just possible examples. The students can be quite imaginative with their responses, but need to have linked it with some of their scientific understanding from the Earth and Atmosphere topic.

## Fact file

| Type of rock: | Identifying features: |
|---|---|
| ☑ sedimentary | Light colour, light weight feel, visible grains, soft crumbly texture, visible layers / banding, may contain fossils |
| ☑ igneous | Hard, shiny, crystals present, darker colours, smooth when polished, may contain gas bubbles |
| ☑ metamorphic | Hard, smooth, wavy layers of colour, crystals present |

Caring for your pet rock... when it's raining.

**Risks to your pet rock:**

Rain water can erode away grains of softer sedimentary rocks. If the rain is acidic, it can have a corrosive effect.

**How to keep it safe:**

Protect your rock by covering with a waterproof material e.g. a poncho or an umbrella!

Caring for your pet rock... at the seaside.

**Risks to your pet rock:**

Waves and salt water can erode away the rock's surface. Rock debris in the water can be bashed into the cliff face, carried by waves.

**How to keep it safe:**

Keep your pet rock away from the sea when the waves are choppy!

Caring for your pet rock... during the winter.

**Risks to your pet rock:**

Water can get into cracks on the rock's surface and then freeze in colder temperatures. When it freezes it expands, breaking the rock.

**How to keep it safe:**

Keep the rock dry and warm. If your rock lives outside, seal any cracks with a water resistant substance e.g. petroleum jelly.
