# Evolution

1. These two animals are the same species. Give two ways that they show variation. [2]

2. Give one cause of variation in a species. [1]

3. Match the keyword to its definition. [2]

| | |
|---|---|
| extinct | variety of species that live on Earth |
| endangered | all members of a species have died out |
| biodiversity | at risk of species dying out |

4. Variation within a species can lead to evolution by natural selection. Explain how. [6]

twinkl.co.uk

5. What is a gene bank? Tick all correct answers [1]

- ☐ storage for denim trousers
- ☐ storage of genes from different species
- ☐ storage of blood from animals

6. What is the purpose of a gene bank? Tick all correct answers [1]

- ☐ used to make new organisms of extinct species
- ☐ used to make new organisms of endangered species
- ☐ used to maintain biodiversity

7. How are genes stored? Tick all correct answers [1]

- ☐ plant seeds are collected and stored
- ☐ animal gametes are frozen and stored
- ☐ young plants are grown and then frozen
- ☐ animal blood samples are chilled and stored

**Learning Outcomes** (tick if achieved)

| | | |
|---|---|---|
| Q1, 2 | I can describe variation and causes of variation. | |
| Q3 | I understand what extinct and endangered mean. | |
| Q4 | I can describe natural selection and evolution. | |
| Q5,6,7 | I know what a gene bank is and what its purpose is. | |

# Evolution **Answers**

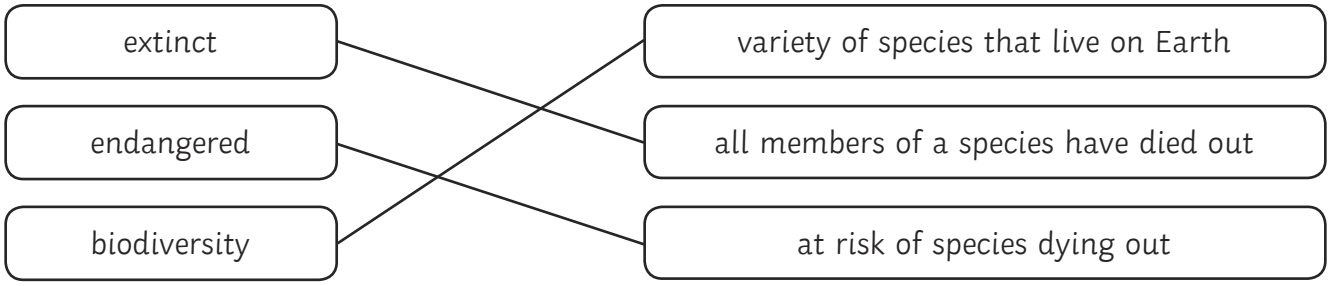

1. These two animals are the same species. Give two ways that they show variation. [2]

   **colour, height, leg length, reins, saddle etc.**

2. Give one cause of variation in a species. [1]

   **genetic or environmental**

3. Match the keyword to its definition. [2]

4. Variation within a species can lead to evolution by natural selection. Explain how. [6]

   **max 6 from:**

   **variation creates different characteristic features**
   **some features are advantageous**
   **advantageous features improve survival**
   **surviving organisms reproduce**
   **advantageous features are inherited**
   **increase of advantageous features in population**
   **more members survive with advantageous feature**
   **increasing numbers of offspring with advantageous feature**
   **species changes over time**

5. What is a gene bank? Tick all correct answers [1]

   ☑ storage of genes from different species

6. What is the purpose of a gene bank? Tick all correct answers [1]

   ☑ used to make new organisms of extinct species

   ☑ used to make new organisms of endangered species

   ☑ used to maintain biodiversity

7. How are genes stored? Tick all correct answers [1]

   ☑ plant seeds are collected and stored

   ☑ animal gametes are frozen and stored
