Particles and States of Matter -

Glossary Pairs Instructions

This is a 5-10 minute activity that can be played several times during the teaching of the course. It is based on the card game 'Pairs'. The pupils work in twos; they place all the cards face-down in a grid. The first person chooses two cards and reads them aloud. If there is a key word with its correct definition, then they keep the cards. Alternatively, if they do not match, they are returned to their original position. The next person has a go. This continues until all the key words are matched with the correct definition.

Gases	The change of state from a solid to gas.
Freezing	The movement of particles in a liquid or gas from a concentrated area to a less concentrated area.
Evaporating	A change of state from gas to liquid.
Boiling point	The particles are very close together, have a very small amount of energy and can only vibrate.
Liquid	To identify how hot or cold something is. The unit is usually ^{0}C

Temperature	The particles are very close together, vibrate and can change places.
Solid	The temperature at which a liquid becomes a gas.
Condensing	A change of state from a liquid to gas.
Diffusion	A change of state from liquid to solid.
Sublimation	The particles are; far apart, have a large amount of energy and move rapidly.
