Ecosystems **Crossword**

bioaccumulation	food chain	population	sun
carnivore	food web	predator	toxin
community	habitat	prey	trophic level
consumer	herbivore	primary consumer	
ecosystem	omnivore	producer	
environment	photosynthesis	species	

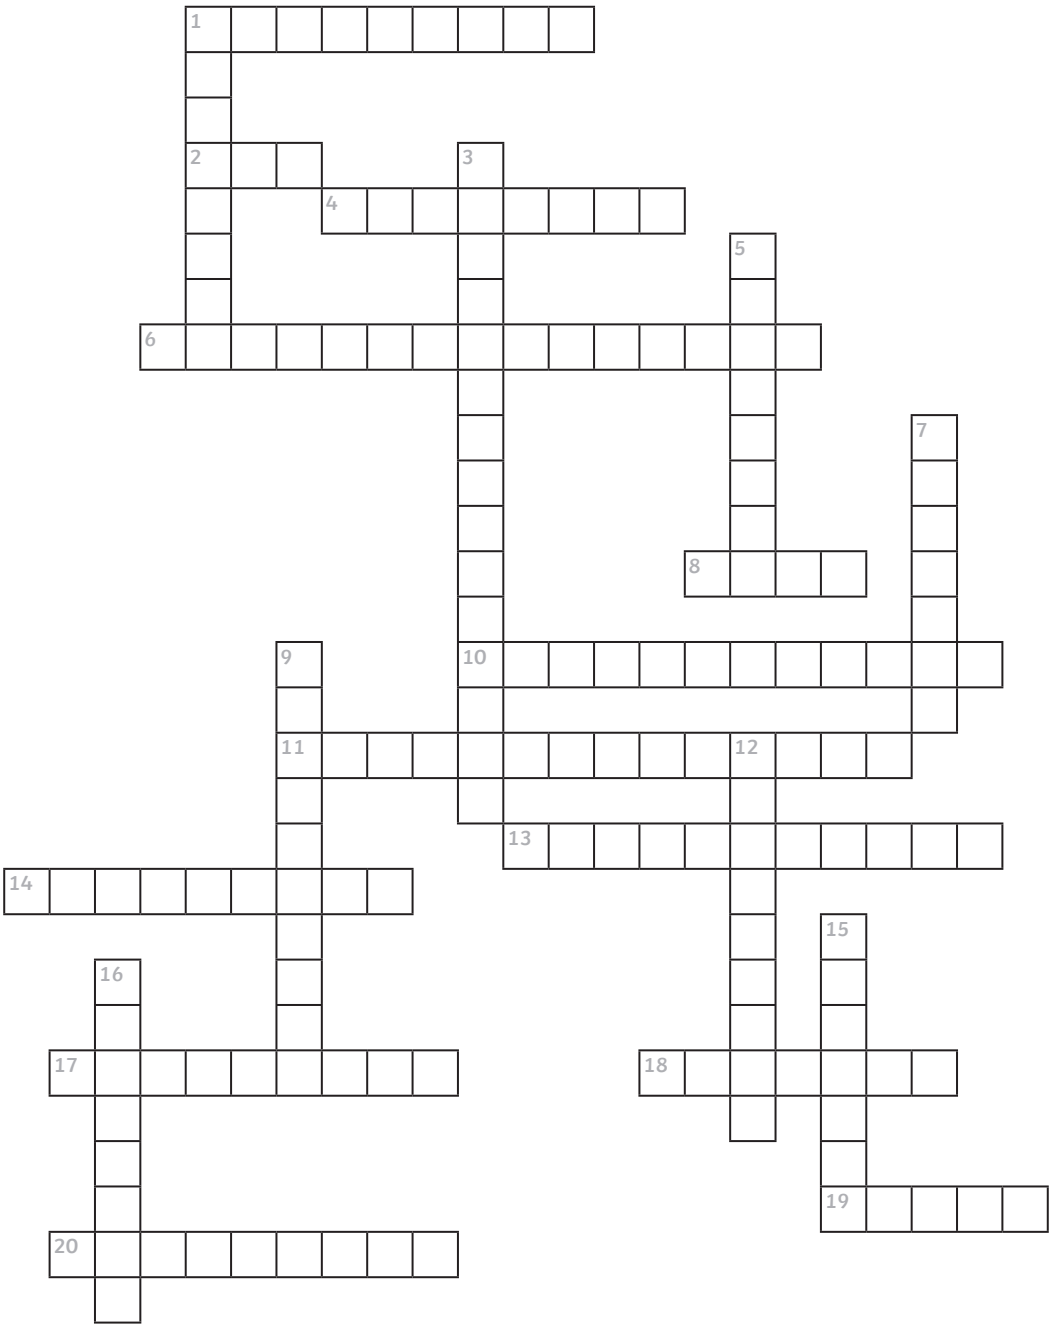

Across

1. Animal that only eats flesh and meat. [9]
2. Source of all of the energy on the Earth. [3]
4. Animal that eats plants and other animals. [8]
6. An organism that eats a producer. [7,8]
8. Animal that is hunted and eaten by other animals. [4]
10. The position an organism has in its food chain. [7,5]
11. Chemical reaction by which plants make their own food. [14]
13. The conditions surrounding a living organism. [11]
14. A linear diagram of feeding relationships between different organisms. [4,5]
17. All the different organisms living together in a particular place. [9]
18. Related organisms that can interbreed and reproduce. [7]
19. A substance that causes harm to people or the environment. [5]
20. Animal that only eats plants. [9]

Down

1. Organism that gains its energy from the consumption of other organisms. [8]
3. When the concentration of something increases along a food chain. [15]
5. Animal that hunts and kills other animals to eat. [8]
7. A network diagram of feeding relationships between different organisms. [4,3]
9. All the members of a particular species living in a habitat. [10]
12. All the organisms and the place where they live. [9]
15. Where an organism lives. [7]
16. The plant that starts a food chain by making its own food. [8]
