Sound Waves **Crossword**

amplitude	frequency	reflection	vibrations
auditory nerve	hertz	refraction	wavelength
dolphin	longitudinal	solid	
ear canal	oscilloscope	ultrasound	
echo	pitch	vacuum	

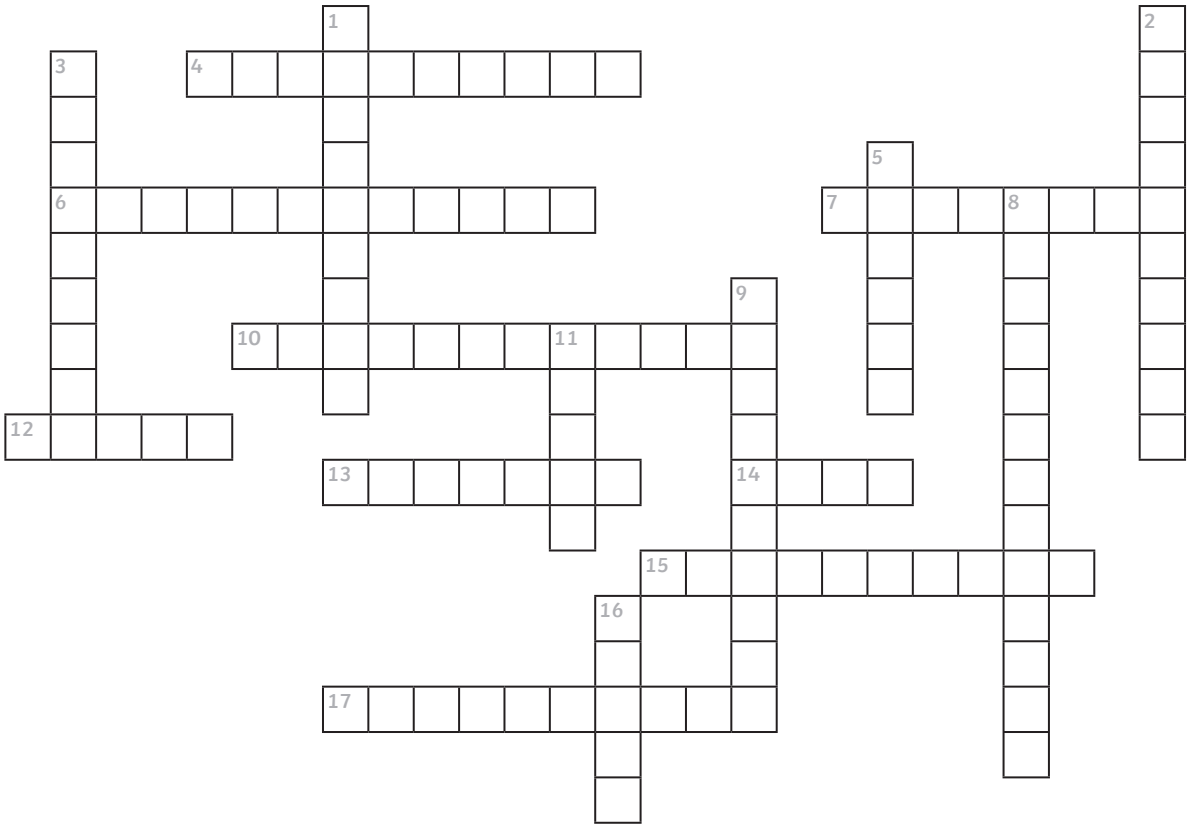

Across

4. How sound is transmitted. [10]
6. A type of wave where the energy is transferred in the same direction that the wave is travelling. [12]
7. Passage from the outside to the inner ear, which sounds travel along. [3,5]
10. A device for viewing the oscillations of a wave. [12]
12. Unit of measurement for frequency. [5]
13. A marine animal that uses echolocation. [7]
14. Reflected sound waves that we hear. [4]
15. Sound waves with a very high frequency, which are used by animals and in medicine. [10]
17. The change in direction of a wave as it moves through a surface at different speeds. [10]

Down

1. The number of waves passing a given point each second. [9]
2. The distance between two identical points on a wave. [10]
3. The height or depth of a wave from the horizontal centre, which affects the loudness of sounds. [9]
5. Sound cannot pass through this type of space as there are no particles. [6]
8. Part of the nervous system that transmits messages from the ear to the brain. [8,5]
9. When a wave bounces off a surface. [10]
11. State of matter that transmits sound that fastest. [5]
16. How high or low the sound is. [5]
