chemical changes	All elements are made from these.
atoms	An atom has this at its centre.
nucleus	These are combined with protons in the nucleus.
neutrons	These particles surround the nucleus on shells.

twinkl.co.uk

electrons	Two or more elements chemically joined together.

twinkl.co.uk

compound	A substance that only has one type of atom.

twinkl.co.uk

element	Two or more atoms that are bonded together, such as oxygen or hydrogen.

twinkl.co.uk

molecule	All the known elements are listed here. All the known elements are listed here.

twinkl.co.uk

periodic table	A water molecule is made up of these two elements.
hydrogen and oxygen	Each element has its own one of these to identify it from others.
chemical symbol	An element with the chemical symbol Mg.
magnesium	The number in a formula shows this.

twinkl.co.uk

if a molecule contains more than one atom	There are approximately this many different elements. twinkl.co.uk
100	The idea that all matter is composed of atoms. twinkl.co.uk
Dalton model	The idea that the mass of something at the start of a reaction remains at the end. twinkl.co.uk
conservation of mass	Carbon dioxide contains this many types of atoms. twinkl.co.uk

2	Elements are divided into these two categories in the periodic table.

twinkl.co.uk

metals and non-metals	Changes of state that are reversible.

twinkl.co.uk

physical changes	Reactions that are irreversible and produce new substances.
