The **Human Eye**

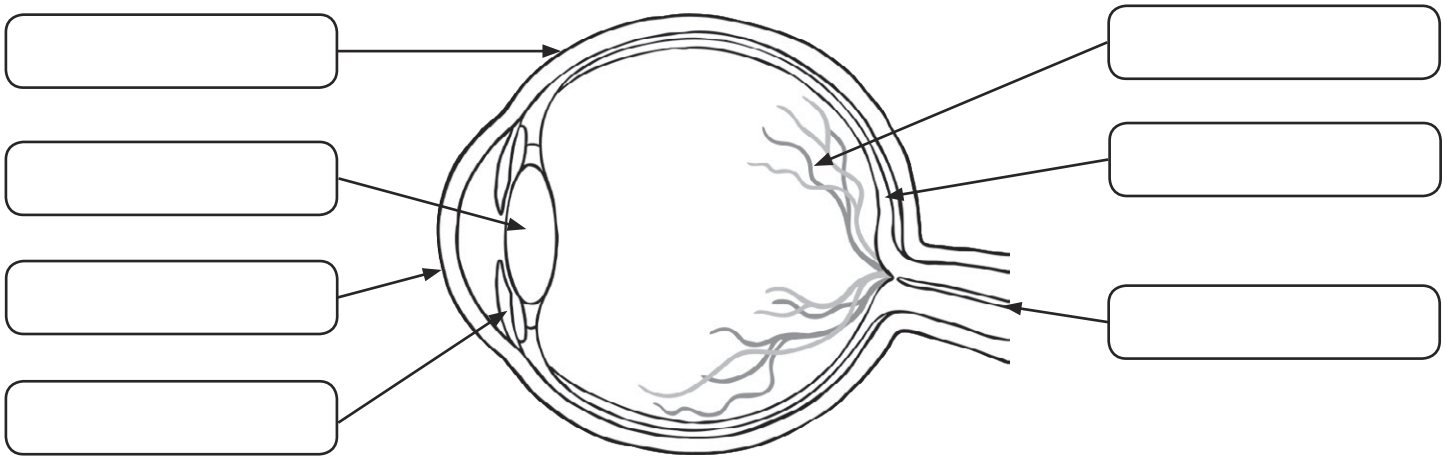

1. Draw arrows on the diagram to show how the person sees the apple. [2]

2. Label the parts of the eye on the diagram using the words from the box. [7]

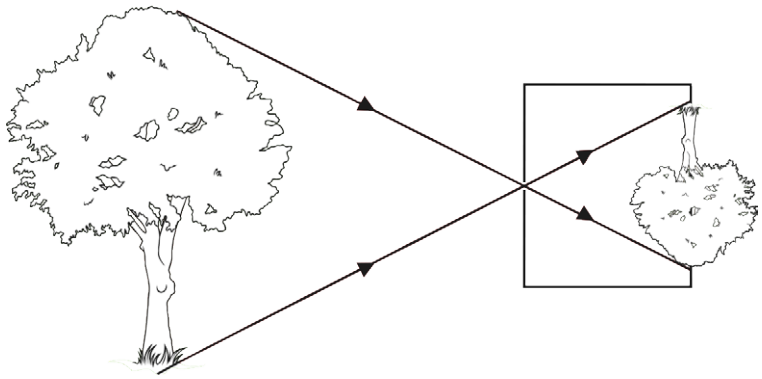

blood vessels	cornea	iris	lens	optic nerve	retina	sclera

3. Describe the function of the lens. [2]

twinkl.co.uk

4. Why does the image appear upside down in a simple camera? [2]

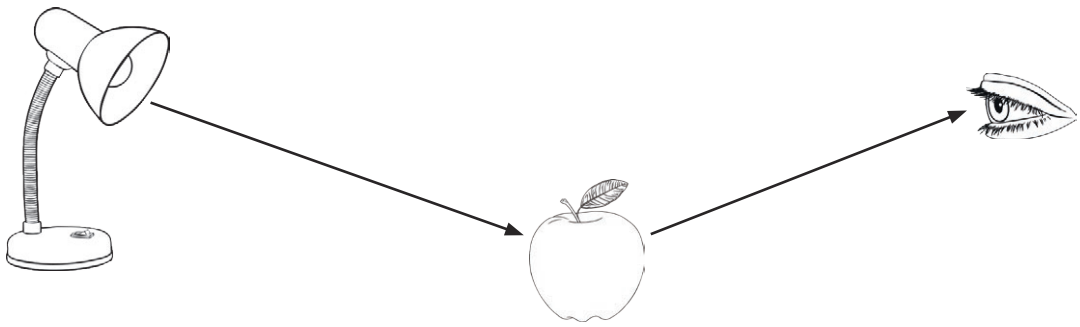

5. State two ways that the human eye and a simple camera are similar. [2]

Learning Outcomes (tick if achieved)

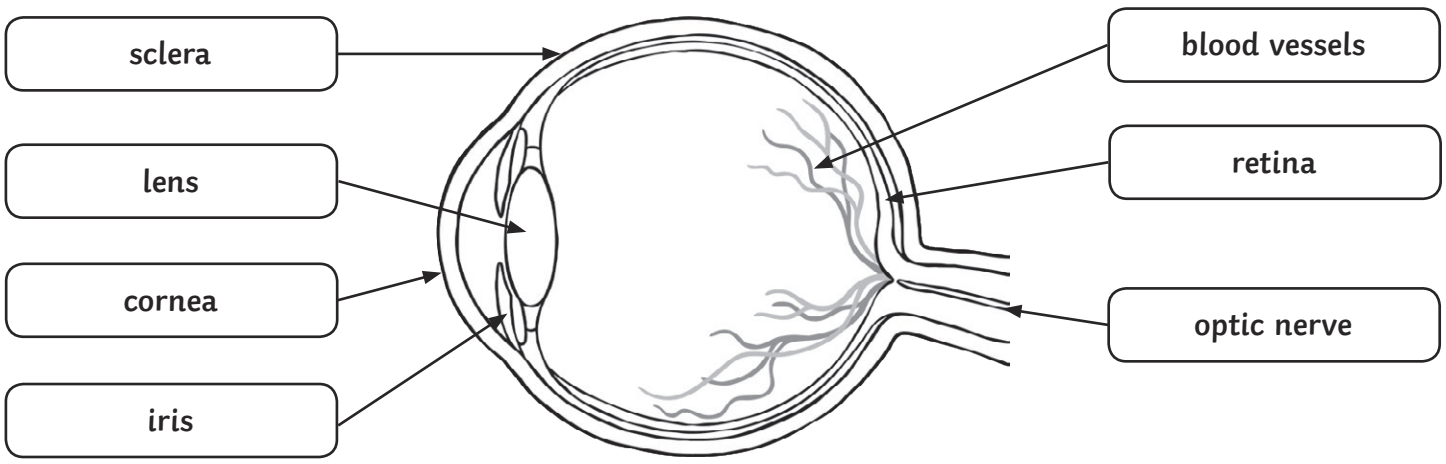

Q1	I can represent how we see using a diagram	
Q2	I can label the parts of the human eye	
Q3	I can describe the function of the lens	
Q4	I can describe how a simple (pinhole) camera works	
Q5	I can compare the human eye and a simple camera	

The Human Eye **Answers**

1. Draw arrows on the diagram to show how the person sees the apple. [2]

2. Label the parts of the eye on the diagram using the words from the box. [7]

3. Describe the function of the lens. [2]

It refracts (bends) light.
It focuses light onto the retina.

4. Why does the image appear upside down in a simple camera? [2]

The hole in the camera is small, so only one light ray from each point of the object enters; the light rays cross over inside the camera.

5. State two ways that the human eye and a simple camera are similar. [2]

The image received is upside down and crossed over.
The light rays cross over.
They focus light on photosensitive area.
A lens refracts / focuses light.
