Student Revision Checklist

Metals and Acids

For your revision, make sure that you are comfortable with each of the following areas of knowledge.

Explain the test for hydrogen gas.			
Compare the reactions of different metals with different acids.			
Name three reactive metals.			
Name two un-reactive metals.			
Write the word equation for the reaction between metals and acids.			
Write the symbol equations for the reaction between metals and acids.			
Use the state symbols (s), (g), (l) and (aq).			
Name two metals that react vigorously with the oxygen in air.			
Use the reactivity series to make predictions.			
Describe how group 1 metals react with water.			
Write an equation for the reaction between group 1 metals and water.			
Describe how magnesium reacts with steam.			
State what a displacement reaction is.			
Explain why magnesium displaces copper in copper sulphate solution.			
Explain why carbon can be used to extract some metals from its ores and not others.			
Explain what is meant by the term ceramics.			
List four physical properties of ceramics.			
State what a polymer is.			
Give an example of a natural polymer.			
Give an example of a synthetic polymer.			
State what a composite material is.			

I Need to Work On...
