Conservation of Mass **Match and Draw**

Draw a line to match what would happen to the mass of the object after the experiment.

A piece of magnesium ribbon is burnt in oxygen	The mass decreases
A piece of ice is left to melt in a beaker	
Sugar is stirred into a beaker of water	The mass increases
Marble chips are placed into hydrochloric acid and a gas escapes	
One liquid is added to another liquid	The mass stays the same
A can of lemonade is opened and left unotuched
