Earth's Seasons Cut and Stick

Cut out all the cards below. Read each of the statements and decide whether it describes winter or summer. Stick each statement into the correct column to annotate the diagram.

Summer in the UK

Winter in the UK

The UK is part of the continent Europe. It is in the northern hemisphere of the Earth.

Day and night are caused by the Earth's rotation on its axis.

Seasons are caused by the angle of the Earth's axis (23.5°).

During the summer, the northern hemisphere is titled towards the Sun.	The sunlight is more spread out and feels colder.	The light rays cover a larger area.
During the winter, the northern hemisphere is tilted away from the Sun.	The sunlight is more concentrated and feels hotter.	The light rays cover a smaller area.

Earth's Seasons Cut and Stick Answers
