Describe:

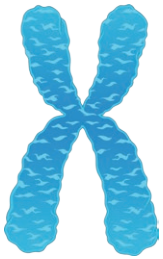

DNA

without using the words:

1. deoxyribonucleic acid
2. base pairs
3. double helix
4. genes
5. parents

twinkl.com

Describe:

chromosome

without using the words:

1. 23 pairs
2. parent
3. gamete
4. nucleus
5. cell

twinkl.com

Describe:

gene

without using the words:

1. DNA section
2. characteristic
3. chromosome
4. genome
5. parents

twinkl.com

Describe:

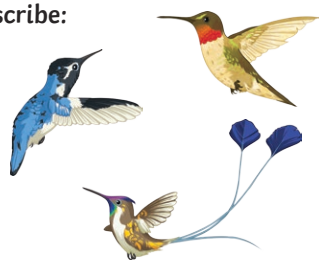

variation

without using the words:

1. different
2. continuous
3. discontinuous
4. inherited
5. environmental

twinkl.com

Describe:

species

without using the words:

1. similar
2. breed
3. fertile
4. offspring
5. organism

twinkl.com

Describe:

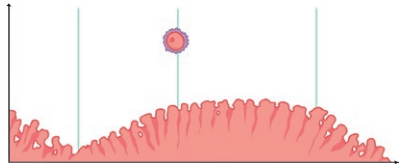

selective breeding

without using the words:

1. species
2. characteristics
3. human intervention
4. variation
5. reproduce

twinkl.com

Describe:

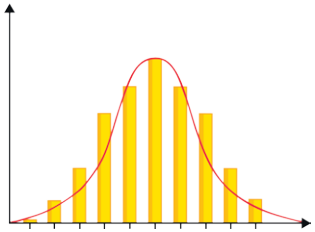

fertile

without using the words:

1. produce
2. offspring
3. infertile
4. reproduce
5. babies

twinkl.com

Describe:

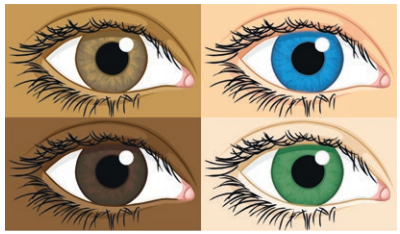

continuous variation

without using the words:

1. range
2. intermediate
3. wide
4. measured
5. extremes

twinkl.com

Describe:

discontinuous variation

without using the words:

1. categories
2. difference
3. individuals
4. blood groups
5. parents

twinkl.com

Describe:

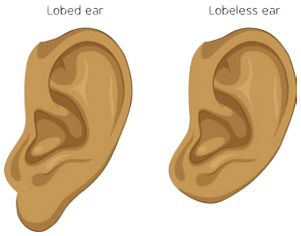

environmental variation

without using the words:

1. changes
2. differences
3. surroundings
4. phenotype
5. cell

twinkl.com

Describe:

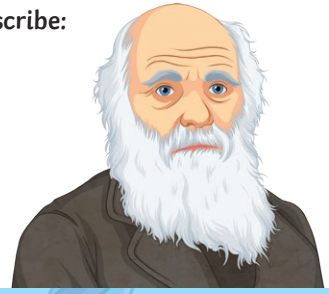

inherited variation

without using the words:

1. genetic
2. variation
3. difference
4. parents
5. characteristics

twinkl.com

Describe:

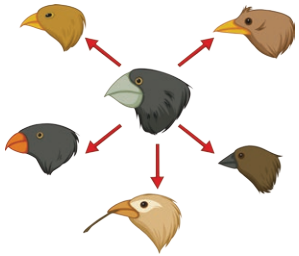

natural selection

without using the words:

1. Charles Darwin
2. survival of fittest
3. adaptation
4. variation
5. strongest

twinkl.com

Describe:

evolution

without using the words:

1. Charles Darwin
2. survival of fittest
3. change
4. generations
5. offspring

twinkl.com

Describe:

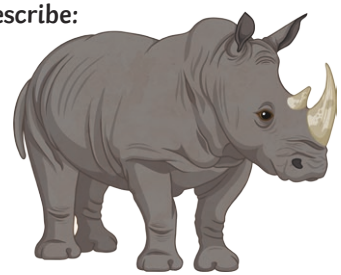

extinction

without using the words:

1. disease
2. predation
3. gone
4. dinosaurs
5. none left

twinkl.com

Describe:

endangered

without using the words:

1. risk
2. extinction
3. hunting
4. disease
5. few

twinkl.com

Describe:

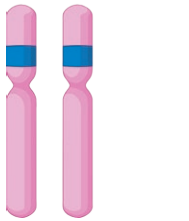

biodiversity

without using the words:

1. wide
2. range
3. variety
4. species
5. different

twinkl.com

Describe:

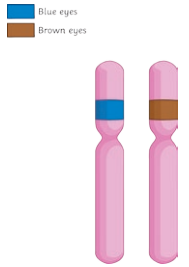

homozygous

without using the words:

1. same
2. allele
3. DNA
4. copies
5. inherit

twinkl.com

Describe:

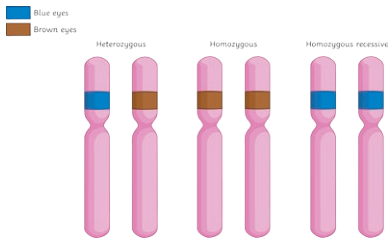

heterozygous

without using the words:

1. different
2. allele
3. DNA
4. copies
5. inherit

twinkl.com

Describe:

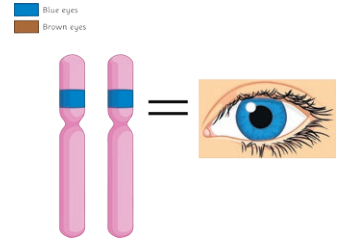

allele

without using the words:

1. two
2. genes
3. dominant
4. recessive
5. parents

twinkl.com

Describe:

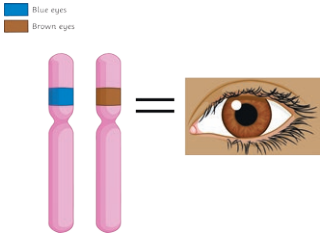

recessive

without using the words:

1. characteristic
2. homologous
3. allele
4. two
5. copies

twinkl.com

Describe:

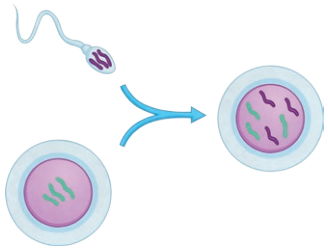

dominant

without using the words:

1. characteristic
2. heterozygous
3. homozygous
4. allele
5. shows

twinkl.com

Describe:

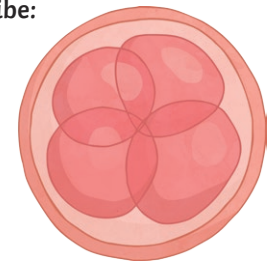

gamete

without using the words:

1. sex
2. cell
3. sperm
4. egg
5. fertilisation

twinkl.com

Describe:

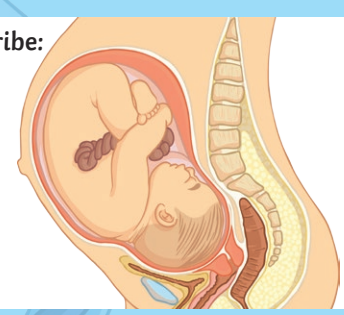

zygote

without using the words:

1. sperm
2. egg
3. fertilise
4. combination
5. DNA

twinkl.com

Describe:

sexual reproduction

without using the words:

1. two
2. parents
3. variation
4. gametes
5. fusion

twinkl.com

Describe:

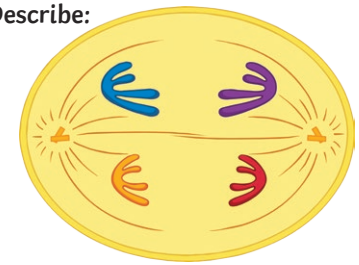

asexual reproduction

without using the words:

1. one
2. parent
3. clone
4. no fusion
5. plants

twinkl.com

Describe:

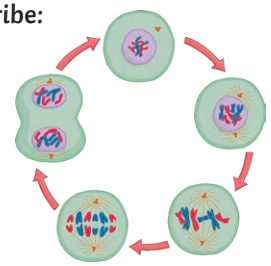

meiosis

without using the words:

1. gametes
2. variation
3. 4 daughter
4. cells
5. egg

twinkl.com

Describe:

mitosis

without using the words:

1. body
2. cells
3. clone
4. identical
5. daughter

twinkl.com
