Hazardous symbols

Strong acids and bases are very dangerous as they are **corrosive**. This means they can attack and destroy living tissue, such as eyes and skin. All dangerous chemicals have 'hazardous' symbols on them to warn people about the risks of using them.

☞ **1** Why is it important to have hazardous symbols on dangerous chemicals?

---

2 Draw a line between each symbol and the correct hazard.

irritant
flammable
toxic
corrosive
harmful

3 Match the sentence halves below.

Corrosive substances	can make you ill, but are not as dangerous as toxic substances.
Irritants	destroy living tissues such as eyes and skin.
Harmful substances	can cause death if swallowed, breathed in or absorbed through the skin.
Flammable substances	are not corrosive but can make the skin go red or blister.
Toxic substances	catch on fire easily.
