Energy changes in chemical reactions

☞ **1** Use the words in the word bank to complete the passage below.

Whenever there is a chemical r_____ an energy c_____ occurs. Some chemical reactions r_____ energy. In other chemical reactions e_____ is needed to start the reaction. Chemical reactions that release energy, normally in the form of h_____, are **exothermic**. C_____ is an important exothermic reaction. It releases heat energy, l_____ energy and s_____ energy.

An e_____ reaction requires some form of energy to be s_____ to start the reaction. **Endothermic** reactions often result in a d_____ in temperature. Photosynthesis is an important endothermic reaction. Plants use energy from the s_____ to make food from c_____ dioxide and w_____.

Word bank
release
change
Combustion
supplied
decrease
water
sun
reaction
heat
endothermic
carbon
energy
light
sound

2 Decide whether each of the following statements is true or false.

a Exothermic reactions need energy supplied to start them. _____

b Exothermic reactions release energy, usually in the form of heat. _____

c Photosynthesis is an example of an exothermic reaction. _____

d Combustion is an example of an endothermic reaction. _____

3 Rewrite the false statements so they are true.

_____

_____

_____

4 Fill in the missing vowels (a, e, i, o, u) to complete the table below.

	Energy is ...	**Example**
