The central nervous system

Look at the diagram of the human central nervous system. The central nervous system passes electrical signals around the body, to and from the brain. It coordinates all the activities of the body, from breathing to running to winking.

☞ **1** Finish these sentences by unscrambling the words in the brackets.
Hint: The labels on the diagram will help you.

In vertebrates (animals with backbones), such as (mahuns) _____, the central nervous system is made up of the (nairb) _____ and the (nalspi) _____ cord. Another important organ is the (nareti) _____ of each eye.

The network of (severn) _____ in the central nervous system is like a system of electrical wiring. The nerves are made up of specialised cells called neurons. Neurons transmit electrical (ssiglan) _____, or messages, along the nerves.

2 Using a coloured pen, draw on the diagram the path that an electrical signal would take from the hand to the brain.

3 Add the missing vowels (a, e, i, o, u) to complete the following words. Hint: All the words have been used on this page.

a) nrvs _____

b) nrns _____

c) trnsmt _____

d) lctrcl _____

e) sgnls _____
