The digestive system

BACKGROUND

nutrients (say 'nu-tree-ants') – substances that provide animals and plants with the energy essential for growth and life

The digestive system enables living things to take in and process nutrients to feed themselves and provide energy for their cells.

☞ **1** Look at the diagram and answer the questions.

Major organs in the human digestive system are:

a) the __ __ o __ a __ __

b) the __ __ a __ __ i __ __ e __ __ i __ e

c) the o e __ o __ __ a __ u __

d) the __ a __ __ e i __ __ e __ __ i __ e

2 Imagine you are following a tiny piece of food around the human body after it has been eaten. Number these stages of its journey in the correct order.

Step ___: The food is broken down into tiny parts by the acids in the stomach.

Step ___: The food is broken down by saliva in the mouth.

Step ___: The faeces is expelled from the body.

Step ___: The food moves down the oesophagus.

Step ___: The food lands in the stomach.

Step ___: The remaining parts of the food leave the stomach and travel into the small intestine.

Step ___: The food moves into the large intestine, where it is stored as faeces.
