METALS: TERMS AND RESEARCH 16

Write the letter of each definition beside the correct term.

Term		
1	alloy	
2	reactivity	
3	aluminium	
4	steel	
5	bauxite	
6	recycle	
7	blast furnace	
8	ore	
9	bronze	
10	metal	
11	coke	
12	iron	
13	compound	
14	haematite	
15	corrosion	
16	atom	
17	limestone	
18	sulfide	
19	hydrogen	
20	lead	
21	malleable	
22	lustrous	
23	ductile	
24	abundance	

Definition	
a	Common metal with the symbol Fe.
b	An alloy containing mainly copper and tin.
c	A form of calcium carbonate used in a blast furnace.
d	Describes how a metal behaves; e.g. with an acid.
e	Mineral from which a metal can be extracted.
f	Element on left-hand side of Periodic Table.
g	Shiny.
h	How much there is of a substance.
i	Can be drawn into wires.
j	An alloy of iron.
k	Can be hammered into shape.
l	To use again.
m	Compound containing sulfur.
n	A mixture of two or more metals.
o	Aluminium ore.
p	Soft, dense metal that doesn't corrode easily.
q	Lightweight metal used to make windows and doors.
r	Gas given off when metals react with acids.
s	Simplest particle of an element.
t	Machinery used to produce iron.
u	Iron ore.
v	'Rust'.
w	Two or more different elements combined.
x	Form of carbon used in a blast furnace.

Research

25 The extraction of metal ores is a very important industry for Australia. Draw up a table showing:

- Name of metal
- Ore from which it is extracted
- A location where it is mined
- The approximate cost of this metal.

Complete the table for four different metals.
