Recognising Mutations

33

It is recommended that you complete worksheet 32, 'More About Mutations: changing DNA' before you attempt this sheet.

Below are eight identical strands of DNA. Colour them, using several colours to highlight the different gene sequences. Each strand should be coloured in the same way, they should all look identical. Cut the strands out. Glue one of the strands in each of the spaces labelled 'Before mutation'.Then make the necessary changes to each of the remaining strips, to illustrate the mutations required. When you have made deletions, make sure you also glue the deleted piece in the box, away from the chromosome.

Addition / duplication
