Looking for Clues!

53

Find the answers to the clues below. The first letters of your answers to the clues (1 to 10) will reveal the answer to the mystery question (11).

1. One of two replicated chromosomes *while they remain attached by a centromere.*
2. Passing genetic information from a parent to offspring is known as this.
3. A strand of nucleotides containing adenine, cytosine, guanine and uracil.
4. Another word for 'progeny'.
5. Method of cell division in which identical daughter cells are produced.
6. Common blood types are A, B, AB and what?
7. Method of reproduction in which a male and a female each contribute half of the offspring's genetic makeup.
8. Period at which the female germ cell is released from the ovary.
9. Method of cell division in which genetically different daughter cells are produced.
10. Gradual changes in a population's gene pool take place by a process called what?
11. I hold a wealth of information. What am I? _____

Pairs

Select the correct term from the pair provided each time.

12. (*Somatic, Germ*) cells develop into body parts.
13. To be (*hybrid, pure-bred*) an offspring's parents must be homozygous for certain traits.
14. Sperm is an example of a (*somatic, germ*) cell.
15. The (*locus, locum*) refers to a position on a chromosome.
16. (*Hybrids, Pure breeds*) are the progeny of parents which are heterozygous for a certain trait.
17. (*Genotype, Phenotype*) refers to an individual's complete genetic make-up, whether or not it is expressed.
18. If two parents that are true-breeding for different traits BB and bb mate the resulting (F_1, F_2) generation will always be (*homozygous, heterozygous*). Such a cross is referred to as a (*monohybrid, dihybrid*) cross.

Correct the spelling errors

Rewrite each of these genetics terms correctly.

19. Fillial
20. Heridity
21. Myosis
22. Feenotype
23. Cromasome
24. Nuclular
25. Hibrid
26. Someatic
27. Mytoses
28. Aleele
