Chemical word equations 13

1 Complete the following word equations using the rules above to help you. Then draw a circle around all the acids, box the bases, underline the carbonates and highlight all the metals.

a iron + hydrochloric acid → iron chloride + _____

b magnesium + hydrochloric acid → _____ + hydrogen gas

c zinc + hydrogen sulfate → zinc sulfate + _____

d magnesium + sulfuric acid → _____ + _____

e lead + hydrogen nitrate → _____ + _____

f zinc + acetic acid → zinc acetate + _____

g potassium + acetic acid → _____ + _____

h sodium hydroxide + nitric acid → _____ + _____

i magnesium carbonate + sulfuric acid → _____ + _____ + _____

j calcium carbonate + hydrochloric acid → _____ + _____ + _____

k iron carbonate + acetic acid → _____ + _____ + _____

l _____ + _____ → hydrogen gas + sodium chloride

m _____ + _____ → sodium sulfate + water

2 Write a word equation for the following reactions, then box the reactants and circle the products for each reaction.

a Hydrochloric acid was added to calcium carbonate powder. Bubbles of carbon dioxide formed together with water. The water was evaporated leaving crystals of calcium chloride.

_____

b Sulfuric acid was added to a solution of potassium hydroxide. After the reaction the water that formed was evaporated, leaving behind potassium sulfate.

_____

c A piece of iron was dropped into some nitric acid. Hydrogen gas was produced leaving behind iron nitrate.

_____

d When copper carbonate was added to hydrochloric acid, carbon dioxide and water were produced together with _____.

e A small piece of calcium was added to acetic acid producing calcium acetate and bubbles of _____.
