Task

Answer the following questions.

1. What are luminous objects? Give one example.

.....

2. What are non–luminous objects? Give one example.

.....

3. Describe the following:

a. transparent objects .....

.....

b. translucent objects .....

.....

c. opaque objects .....

.....

d. incident ray .....

.....

e. reflected ray .....

.....

f. normal .....

.....

g. angle of incidence .....

.....

h. angle of reflection .....

.....

4. State the law of reflection. .....

.....
.....
.....
.....
.....
.....

Teaching notes and answers

This could be used a mini individual assessment or as a team activity e.g. print one sheet per team and cut up into 3-4 sections, a member of each team comes up to get the first section, once their team has successfully answered it they come up for the next section, the first team to complete all the questions wins.

1. Objects that emit light are luminous. E.g. the Sun, stars, candle etc.

2. Objects that do not emit light. E.g. a book, table, car etc.

3.

a. They are objects that allow light to pass through so that things on the other side can be seen clearly.

b. Objects that allow only some light to pass through but many light rays are scattered.

c. Objects that do not allow any light ray to pass through.

d. A light ray that strikes a surface.

e. A light ray that is refelcted from a surface.

f. A line perpendicular to the surface where the incident ray strikes.

g. The angle between the incident ray and the normal.

h. The angle between the reflected ray and the normal.

4. The law of reflection states that the incident ray, the reflected ray, and the normal to the surface of the mirror all lie in the same plane. Furthermore, the angle of reflection is equal to the angle of incidence.
