Task

The table is muddled.
Cut out the boxes in the second and third columns. Arrange the boxes to complete the table.

1. Type of fertilisation	External fertilisation	Internal fertilisation
2. Organism	 frog	 gorilla
3. Number of gametes produced	Only one offspring is likely to be produced.	The number of young produced is about 5 000.
4. Chance of fertilisation	Fertilisation takes place outside the parents' bodies.	Fertilisation takes place inside the female's body.
5. Place of fertilisation	Eggs have a high chance of being fertilised.	Many of the eggs produced will not be fertilised.
6. Site where offspring develop	Most offspring are likely to survive.	Many of the offspring will not survive.
7. Time taken for offspring to develop	The offspring develop as eggs in ponds, lakes and streams.	The offspring develop in the female's uterus.
8. Number of young produced	Offspring will not spend any time with their parents.	Offspring will be cared for by parent for 2.5 years.
9. Chance of survival	The offspring take about 8.5 months to develop.	The offspring take about 20 days to develop.
10. Time spent with parents	Large numbers of gametes are produced.	Far fewer gametes are produced.

Answers

1. Type of fertilisation	External fertilisation	Internal fertilisation
2. Organism	 frog	 gorilla
3. Number of gametes produced	Large numbers of gametes are produced.	Far fewer gametes are produced.
4. Chance of fertilisation	Many of the eggs produced will not be fertilised.	Eggs have a high chance of being fertilised.
5. Place of fertilisation	Fertilisation takes place outside the parents' bodies.	Fertilisation takes place inside the female's body.
6. Site where offspring develop	The offspring develop in ponds, lakes and streams.	The offspring develop in the female's uterus.
7. Time taken for offspring to develop	The offspring take about 20 days to develop.	The offspring take about 8.5 months to develop.
8. Number of young produced	The number of young produced is about 5 000.	Only one offspring is likely to be produced.
9. Chance of survival	Many of the offspring will not survive.	Most offspring are likely to survive.
10. Time spent with parents	Offspring will not spend any time with their parents.	Offspring will be cared for by parent for 2.5 years.
