Activity

Cut out the tiles. Don't cut down the middle!

Stack up the tiles in each set, starting with the tile with the blank face at the bottom of the pile, so that the definition of each keyword lies directly above it.

Fill in the blank space with a definition for the final keyword.

1.

	asexual reproduction
Production of new plants from a few cultures.	**clones**
tissue culture	Reproduction without gametes.
cutting	Genetically identical organisms.

2.

The best adapted organisms survive and reproduce.	**theory of acquired characteristics**
theory of natural selection	Characteristics of an organism change according to how they are used.
	theory of evolution
survival of the fittest	Characteristics of a group of organisms change over time.

3.

An organism that no longer exists.	**sedimentary**
amber	Fossils are found in this type of rock.
extinct	Mineralised remains of an organism.
	fossil

Teaching notes

NB The keywords are all in bold on the shaded sides of the tiles and the definitions are in regular font on the white sides.

Answers

1.

A section of plant which will grow into a new plant when given the correct conditions.	**Asexual reproduction**
Tissue culture	Reproduction without gametes.
Production of new plants from a few cultures.	**Clones**
Cuttings	Genetically identical organisms.

2.

The environment favours the best adapted organisms.	**Theory of evolution**
Survival of the fittest	Characteristics of a group of organisms change over time.
The best adapted organisms survive and reproduce.	**Theory of acquired characteristics**
Theory of natural selection	Characteristics of an organism change according to how they are used.

3.

Fossilised tree sap.	**Fossil**
Extinct	Mineralised remains of an organism.
An organism that no longer exists.	**Sedimentary**
Amber	Fossils are found in this type of rock.
