Task 1

You are going to create a short keyword bank. Write the definitions for the keywords in the table below.

Keyword	Definition	
autotrophic feeder		
bacteria		
cell wall		
characteristics		
classification		
genus		
family		
heterotrophic feeder		
photosynthesis		
saprotrophic feeder		
species		

Self-assessment score: .....

Task 2

Describe the characteristics of each of the kingdoms.

Kingdom	Characteristics	
Animal		
Plant		
Fungi		
Protoctists		
Prokaryotes		

Self-assessment score: .....

Task 3

Describe what is meant by binominal naming system.
Explain why it is important to use the binominal naming system.

.....

Suggested answers

Task 1

Keyword	Definition
autotrophic feeder	makes own food from inorganic molecules e.g. by photosynthesis
bacteria	single celled organisms with no nucleus
cell wall	a layer around the cell membrane made of cellulose
characteristics	features or traits
classification	A process by which scientists name and group living organisms
genus	A category in classification below family and above species
family	A category in classification between order and genus
heterotrophic feeder	eat and digest other organisms
photosynthesis	photosynthesis – using light, carbon dioxide and water to make glucose
saprotrophic feeder	feeds on decaying matter
species	organisms that can breed together to produce fertile offspring

Task 2

Animal	**Multicellular**, no cell wall or chlorophyll, **heterotrophic** feeders
Plant	**Multicellular**, have cell walls and chlorophyll, **autotrophic** feeders
Fungi	**Multicellular**, have cell walls, **do not** have chlorophyll, **saprophytic** feeders
Protoctists	**Unicellular**, with a nucleus
Prokaryotes	**Unicellular**, with **no** nucleus

Task 3

The binomial naming system uses the genus and species name (1 mark). It uses Latin, so it is only in one language and stops confusion (1 mark). It helps with conservation as species can be clearly identified (1 mark).

Stretch task answers
Viruses do not possess all of the requirements for living organisms (1 mark), such as reproduction or growth (1 mark). New viruses are created by taking over a host cell and using it to replicate the virus (1 mark).
