Questions

1. What R is another name for the corrosion of iron?
2. Which W is needed for iron to corrode?
3. Which IO is made when iron corrodes?
4. Which E is the splitting of compounds with electricity?
5. Which M isn't lost during a chemical reaction?
6. Which P do reactants make in a chemical reaction?
7. Which ER gives of heat energy?
8. Which C is another name for burning?
9. Which L is used to test for carbon dioxide?
10. Which A is made by yeast fermenting sugar?
11. Which P is a very reactive metal?
12. Which G is a very unreactive metal?
13. Which A has a low pH?
14. Which T is measured in centigrade?
15. Which P can be used to cover iron to stop it corroding?
16. Which C speeds up the rate of a reaction?
17. Heat is needed to turn calcium carbonate to calcium oxide and carbon dioxide, which TD is this reaction?
18. Which HE is taken in during an endothermic reaction?
19. Which D is a reaction where a more reactive metal replaces a less reactive metal in its compound?
20. Which O is a reaction that forms an oxide?

Answers

1	rusting	**11**	potassium
2	water	**12**	gold
3	iron oxide	**13**	acid
4	electrolysis	**14**	temperature
5	mass	**15**	paint
6	products	**16**	catalyst
7	exothermic reaction	**17**	thermal decomposition
8	combustion	**18**	heat energy
9	limewater	**19**	displacement

10 alcohol

20 oxidation
