Task 1

1. Match the correct flow to the correct definition.

	Flow		Definition
1	condensation	A	moisture, e.g. rain, sleet or snow, falling from the atmosphere
2	evaporation	B	the absorption and downward movement of water into the ground
3	ground water flow	C	the capture of rainfall on buildings or by vegetation, e.g. the tropical rainforest canopy
4	infiltration	D	the flow of precipitation along the stems of a plant to the ground
5	interception	E	the flow of water across the surface of the ground
6	precipitation	F	the loss of moisture from vegetation
7	stem flow	G	the movement of water through rocks
8	surface run off	H	the roughly horizontal movement of water through the soil
9	throughflow	I	the transfer from water as a liquid to water as a gas
10	transpiration	J	the transfer of water as a gas (water vapour) to water as a liquid (rain droplets)

Task 2

1. Match the six processes to the correct arrow: deposition, sublimation, freezing, condensation, evaporation, melting

2. Add to the ovals the places where the different states of water are stored: oceans, glaciers, lakes, atmosphere, rivers, aquifers, ice sheets

Teaching notes and answers

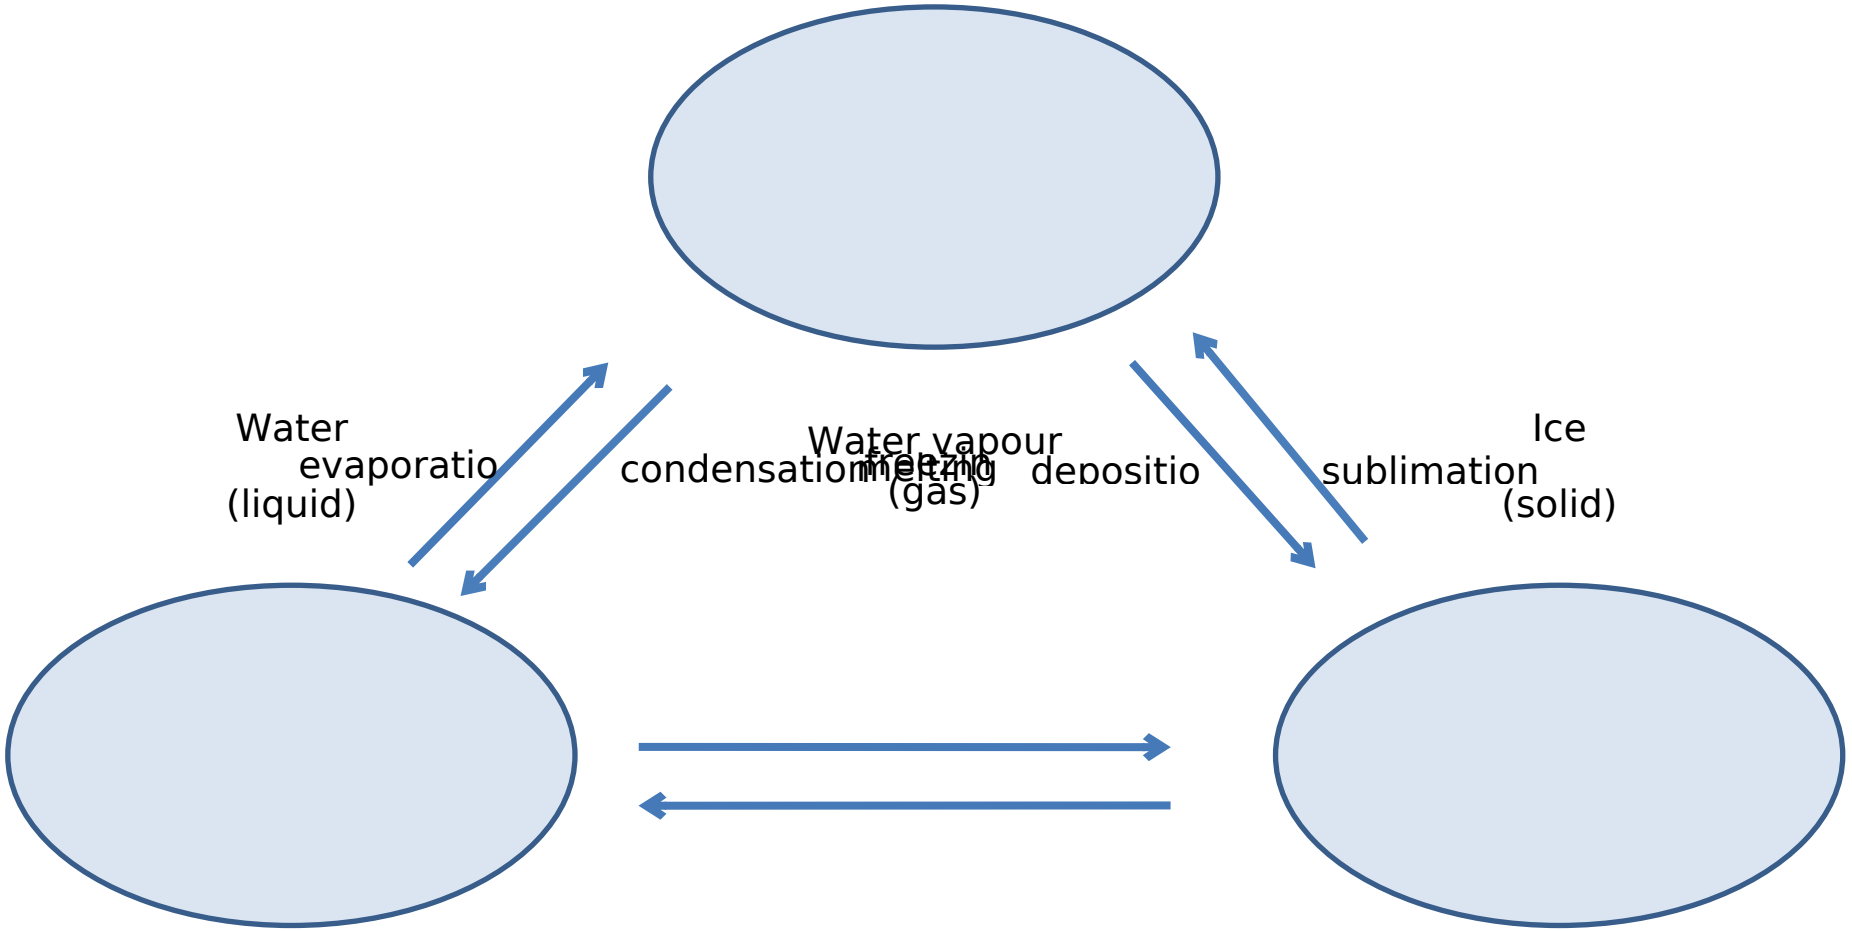

Use the two tasks to provide students with the information needed to help them generate a diagram of the water cycle. This could be completed as a think-pair-share format.

Ask students to suggest the importance of water to life on Earth:

- acts as a solvent for cellular chemical reactions
- helps transport dissolved compounds into and out of cells
- is a reactant or product in biochemical processes such as respiration, photosynthesis and digestion
- provides habitats for many living organisms.

Task 1

	Flow		Definition
1	condensation	J	the transfer of water as a gas (water vapour) to water as a liquid (rain droplets)
2	evaporation	I	the transfer from water as a liquid to water as a gas
3	ground water flow	G	the movement of water through rocks
4	infiltration	B	the absorption and downward movement of water into the ground
5	interception	C	the capture of rainfall on buildings or by vegetation, e.g. the tropical rainforest canopy
6	precipitation	A	moisture, e.g. rain, sleet or snow, falling from the atmosphere
7	stem flow	D	the flow of precipitation along the stems of a plant to the ground
8	surface run off	E	the flow of water across the surface of the ground
9	throughflow	H	the roughly horizontal movement of water through the soil
10	transpiration	F	the loss of moisture from vegetation
