Question grid

	Question	Answer
1.	What **E** does FSH cause to mature in the ovaries?	egg
2.	Which **T** is a hormone that stimulates basal metabolic rate?	thyroxine
3.	What **O** is the release of an egg from the ovary?	ovulation
4.	What **P** do oral contraceptives contain?	progesterone
5.	What **F** is a tube into which eggs are released when they are mature?	fallopian
6.	What I from your diet is used by the thyroid gland to produce thyroxine?	iodine
7.	Which **A** is a hormone that causes your heart rate to increase?	adrenaline
8.	What L is part of the uterus that is built up and maintained by oestrogen and progesterone?	lining
9.	What **S** are made continuously by the testes?	sperm
10.	What **B** is the name given to contraceptive methods that prevent sperm reaching the egg?	barrier
11.	What **I** can IVF be used to treat?	infertility
12.	What **G** is the response of plants to gravity?	gravitropism
13.	What **A** is a plant hormone?	auxin
14.	What **D** is caused by a lack of insulin?	diabetes
15.	What **P** produces insulin?	pancreas
16.	What **G** is a plant hormone that initiates seed germination?	gibberellins
17.	What **P** is the response of plants to light?	phototropism
18.	What **N** is a type of feedback system that works to maintain a steady state?	negative
19.	Which **C** is the only method of contraception that gives some protection against STDs?	condom
20.	Which **T** produces testosterone?	testes

Teaching notes

Students could be given the game to play in small teams with one of them as the question master. Each team will need 10 coloured counters or hexagons to place on the grid when they get a question right.

The object of the game is to complete a path across the board. One team should make a path from left to right and the other teams should go from top to bottom. The original TV game pitted one contestant (on the shorter path (top to bottom)) against a pair (going left to right).

Teams take it in turns to choose a hexagon. If they get the question correct they place a coloured counter over the hexagon. The team that wins is the one that makes a complete path from one side to the other.

The grid can be used on an interactive whiteboard. Click and drag the coloured counters to cover the appropriate hexagon when a question is answered correctly.
