Task 1

Use the reactivity series to predict the following reactions.

1. copper oxide + magnesium ⟶
2. lead nitrate + tin ⟶
3. lead chloride + iron ⟶
4. copper sulphate + calcium ⟶
5. aluminium + silver chloride ⟶
6. iron oxide + carbon ⟶

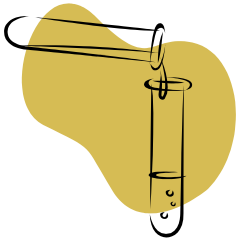

Task 2

Look at this list of reactions. Use your reactivity series to predict which reactions will take place.

Complete the reactions that will take place, put a cross by the ones that will not.

1. aluminium + zinc oxide
2. sodium chloride + aluminium
3. zinc sulphate + copper
4. calcium chloride + iron
5. magnesium + silver nitrate

Remember: a metal element higher in the table will displace (pinch) the non-metal element(s) (e. g. oxygen) or their salts (e.g. sulphate), from a metal lower in the reactivity series. These are displacement reactions.

Answers

Task 1

1 magnesium oxide + copper

2 tin nitrate + lead

3 iron chloride + lead

4 calcium sulphate + copper

5 aluminium chloride + silver

6 iron + carbon dioxide

Task 2

1.	aluminium + zinc oxide		zinc + aluminium oxide
2.	sodium chloride + aluminium	**x**	
3.	zinc sulphate + copper	**x**	
4.	calcium chloride + iron	**x**	
5.	magnesium + silver nitrate		silver nitrate + magnesium
