Teaching notes

1. Make sure that all students have selected nine words from the list provided and written one in each of the blank spaces on their bingo card.
2. Read out the definitions below at random, keeping a tally of those that you have used.
3. If the students think they have the word that matches the definition, then they should cross it through on their bingo card. The three winners are the first with a horizontal line, the first with a vertical line, and then the first with a full house.
4. Check that the words on the winner's bingo card match the definitions that you have read out.

Key term	Definition
atom	the most basic unit of an element
boiling	a substance changing state from liquid to gas when heated
condensing	cooling a gas to change it into a liquid
decant	pour off a liquid from a heavier solid or another liquid
dissolve	when a solid is mixed into a liquid and then separates into particles too small to see
evaporating	a liquid turning into a gas
freezing	changing from a liquid to a solid
gas	has no fixed shape or volume
insoluble	a solid that does not dissolve in the liquid that it has been mixed with
irreversible	a permanent change that cannot be changed back
liquid	take the shape of the container they are in, yet their volume remains constant
melting	changing from a solid to a liquid
molecule	a particle that is composed of two or more atoms chemically joined together
permanent	a change that cannot be reversed
property	a characteristic of a material
reversible	when a change is not permanent and can be changed back
solid	keeps its shape unless a force is put on it
soluble	a substance that will dissolve

solution	a mixture of two materials when one has dissolved in the other
temperature	a measure of how much heat energy something has
vapour	a gas that can be condensed to a liquid
vibrating	moving really quickly about a fixed point
viscous	a thick liquid

1. Select nine words from the list at the bottom of the page and write each one in a blank space in the grid below.
2. Listen as your teacher reads out some definitions.
3. When you hear the definition for one of the words on your bingo card, put a neat cross through the word.
4. Call out ‘Bingo!’ when you have either a horizontal line, a vertical line or a full house.

molecule	solution	temperature
vapour	atom	boiling
condensing	decant	dissolve

evaporating	viscous	vibrating
solid	soluble	reversible
properties	permanent	melting
liquid	irreversible	insoluble
freezing	gas
