	Question	Answer
1.	What S has rings containing ice particles?	
2.	What O is the name given to the elliptical path taken by a planet around the Sun?	
3.	What M are particles that burn up as they fall through the Earth’s atmosphere?	
4.	What AS are launched into space, where they orbit the Earth to collect information?	
5.	What SS contains planets, satellites, asteroids and comets?	
6.	What C are objects that release gas and dust as they move near to the Sun?	
7.	What M are found around Earth, Jupiter, Mars, Saturn, Uranus and Neptune?	
8.	What E occurs when the Earth’s shadow falls on the Moon?	
9.	What G is the force that attracts masses towards each other.	
10.	What A are rocky objects found in a belt between Mars and Jupiter?	
11.	What S is the nearest star to Neptune?	
12.	What M is often known as ‘the Red Planet’ due to red iron oxide on its surface?	
13	What MW is the name of the galaxy our solar system is part of?	
14.	What P was classed as a planet until 2006 but is now known as a dwarf planet?	
15.	What BH is a region of space where gravity is so strong it pulls everything towards it including light?

	Question	Answer
1.	What S has rings containing ice particles?	Saturn
2.	What O is the name given to the elliptical path taken by a planet around the Sun?	an orbit
3.	What M are particles that burn up as they fall through the Earth’s atmosphere?	meteors
4.	What AS are launched into space, where they orbit the Earth to collect information?	artificial satellites
5.	What SS contains planets, satellites, asteroids and comets?	the solar system
6.	What C are objects that release gas and dust as they move near to the Sun?	comets
7.	What M are found around Earth, Jupiter, Mars, Saturn, Uranus and Neptune?	moons
8.	What E occurs when the Earth’s shadow falls on the Moon?	an eclipse
9.	What G is the force that attracts masses towards each other.	gravity
10.	What A are rocky objects found in a belt between Mars and Jupiter?	asteroids
11.	What S is the nearest star to Neptune?	the Sun
12.	What M is often known as ‘the Red Planet’ due to red iron oxide on its surface?	Mars
13	What MW is the name of the galaxy our solar system is part of?	the Milky Way
14.	What P was classed as a planet until 2006 but is now known as a dwarf planet?	Pluto
15.	What BH is a region of space where gravity is so strong it pulls everything towards it including light?	a black hole
