Worksheet 9.8

Summing up

Answers

Complete the statements below to compile a summary of this unit. The missing words can be found in the word list below.

1. Rocks on the Earth's surface are constantly being broken down into smaller rocks in a process called ...weathering.....
2. ..Erosion..... is the movement of weathered rock from one place to another. The main agents of erosion are wind, running ...water....., the sea and glaciers.
3. Sediments..... are deposited by running water. The ...larger..... particles settle first.
4. Most sedimentary rocks are formed from weathered rock that has been ..deposited..... due to erosion.
5. ..Limestone..... and .....coal..... form from sediments comprising the remains of living things.
6. Metamorphic..... rocks form when igneous or sedimentary rocks are exposed to high temperatures or ..pressure.....
7. Sedimentary rocks form in layers. ....Fossils..... preserved in these layers provide valuable clues about the order in which events on Earth took place.
8. A fossil is evidence of life in the past. Scientists who study fossils are called palaeontologists.....
9. The ...relative..... age of a rock indicates whether it was formed before or after other rocks.
10. Fossils provide many ..clues..... about the appearance and behaviour of dinosaurs.
11. Dinosaurs became .....extinct..... about 65 million years ago. The most widely accepted theory put forward to explain their death is an ...asteroid..... impact on Earth.
12. Fossil studies indicate that the five ...kingdoms..... of living things appeared on Earth at different times, beginning with bacteria-like organisms about 3500 million years ago.

relative	fossils	asteroid
kingdoms	clues	sediments
deposited	pressure	metamorphic
weathering	palaeontologists	coal
water	extinct	larger
limestone	erosion
