Worksheet 4.2

The digestive system

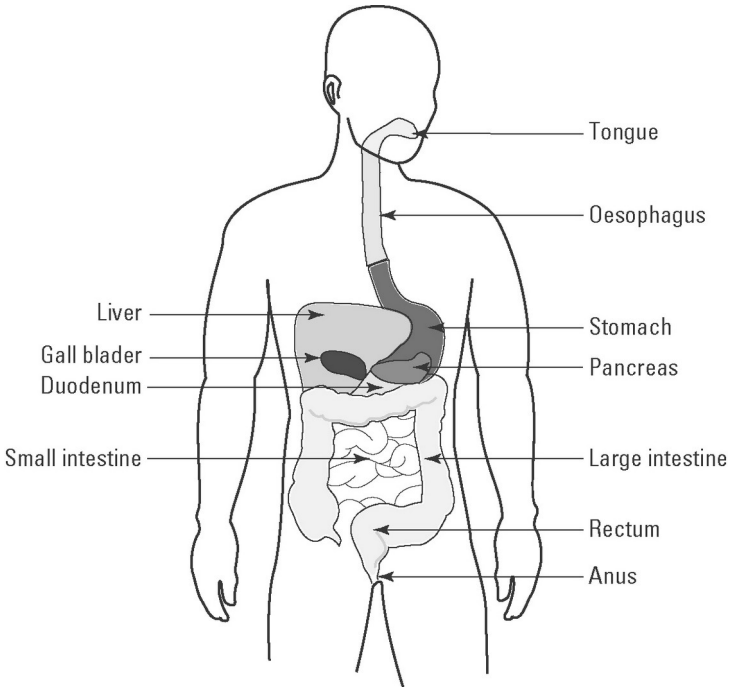

Answers

The cells in your body need nutrients from food. The process of breaking down food into tiny particles takes place in your digestive system. The broken-down food is distributed to the cells of your body via the blood. The digestive system also removes indigestible food from your body.

1. (a) Draw in the parts that are missing from the diagram.

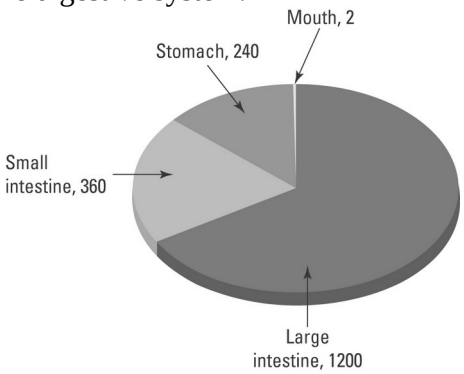

(b) Colour in each organ/part and label it with its correct name.

Organs of the digestive system					
gall bladder	pancreas	stomach	oesophagus	liver	tongue
large intestine	small intestine	duodenum	rectum	anus	

Time to digest

The pie chart below provides information about the time in minutes that food spends in each organ of the digestive system.

Organ	Time for digestion (min)
Mouth	2
Stomach	240
Small intestine	360
Large intestine	1200

2. (a) Convert this information into tabular format.

(b) Calculate the number of hours that food spends in the large intestine.

.....Time in large intestine $\frac{1200}{60} = 20$ hours.....
