Worksheet 9.3

Sedimentary rocks

Student: ..... Class: .....

Rock face

1. Photograph A shows a rock face in a road cutting. Photographs B, C and D show three rocks.

A

B

C

D

(a) Explain how a student studying photograph A would decide that the rocks shown were probably sedimentary. They are bedding in layers

(b) Closer examination of the rocks in the road cutting confirmed they were sedimentary. Identify which rock sample (B, C or D) would most likely be found in this road cutting. Explain your answer.

C This rock is conglomerate, whereas the other rocks are igneous.

Types of sedimentary rocks

2. (a) The following table provides information on the types of sedimentary rocks. Complete the table by naming the sediments that form each rock.

Sediment	Rock type	%
Clay	Shale	67
Sand	Sandstone	19
Calcite	Limestone	9
	Other sedimentary rocks	5

(b) Construct a pie chart of the types of sedimentary rocks in the space below.
