Worksheet 7.6

Science Quest 9: page 275

Chemical reactions: Summary

Student: ..... Class: .....

Use the words listed below to complete the sentences.

acidic	antacids	basic	oxidation
combustion	oxygen	dioxide	equations
melting	exothermic	neutralise	nitrogen
products	reactants	reversible	endothermic

1. In a chemical change one or more new substances are formed and the process is not easily …….. .
2. The burning of a candle involves both physical and chemical changes. The ……. of the wax is a physical change and the ……. of the wax vapour is a chemical change.
3. In a chemical reaction the starting materials are called the ……. and the substances that are formed are called the …….. .
4. Word ……. can be used to describe the chemical change.
5. ……. reactions produce heat.
6. ……. reactions absorb heat from their surroundings.
7. Acids are substances that ……. bases to produce salts and water. Indicators can be used to determine whether a substance is an acid or a base.
8. The pH scale is used to classify acids and bases. If the pH is less than 7, then the substance is ……. If the pH is above 7, then the substance is …….. .
9. Acidic gases such as sulfur dioxide and ……. dioxide produce acid rain when they dissolve in rain. Acid rain can cause significant environmental destruction.
10. Indigestion can be relieved by using ……., which neutralise excess acidity in the stomach.
11. When a fuel burns in the presence of air or oxygen heat is produced. If the fuel is a hydrocarbon, then carbon ……. and water are formed unless the oxygen supply is limited.
12. ……. reactions involve the transfer of electrons from a reactant.
13. Not all oxidation reactions involve ……. .
