Worksheet 4.4

The structure of the atom

Student:..... Class:.....

The atom

1. The following drawing shows a simplified structure of an atom.

Identify the labelled components of the atom.

A:

B:

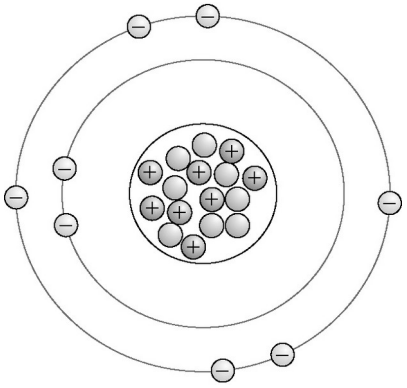

C:

D:

E:

The oxygen atom

2. The diagram below shows the atomic structure of oxygen.

(a) How many of each type of sub-atomic particle are present?

Electrons: .....
Protons: .....
Neutrons: .....

(b) Is the oxygen atom shown above neutral or charged? Explain.

.....

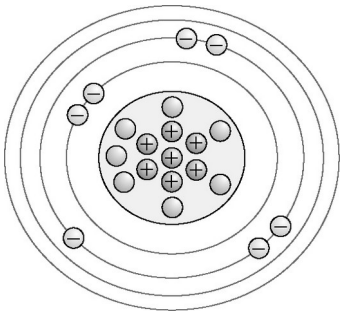

.....

(c) How many nucleons (total particles) are present in the nucleus? .....

Atoms and ions

3. The diagram below shows a nitrogen atom. A nitrogen atom can form an ion by gaining three more electrons, so that its electron configuration becomes 2, 8.

(a) In the diagram above, how many of each type of sub-atomic particle are present?

Electrons: .....
Protons: .....
Neutrons: .....

(b) Draw the nitrogen ion described above.

(c) In the diagram you have just drawn, how many of each type of sub-atomic particle are present?

Electrons: .....
Protons: .....
Neutrons: .....
