Worksheet 4.8

Summing up

Answers

Complete the statements below to compile a summary of this unit. The missing words can be found in the list below.

1. Blood travels around your body in tubes called ..... blood vessels ..... .
2. ... Arteries ..... have thick, elastic, muscular walls and carry blood away from your heart.
3. .... Veins ..... have thinner walls and valves that carry blood to the heart.
4. .... Capillaries ..... are the site of exchange of materials like oxygen, nutrients and wastes.
5. Blood is made up of ..... Red blood cells .... (erythrocytes), white blood cells (.. leucocytes .....), ... blood platelets ..... and the straw-coloured fluid that they all float in called ..... plasma ..... .
6. ..... Haemoglobin ..... in the red blood cells helps transport oxygen throughout the body.
7. ..... Oxygenated ..... blood is pumped through the left atrium and ventricle of your heart whereas ..... deoxygenated ..... blood is pumped through the right atrium and ventricle of your heart.
8. ..... Valves ..... prevent the blood from flowing backwards and keep it going in one direction.
9. A process that gets rid of unwanted products or wastes from the body is called ..... excretion ..... .
10. The ..... kidneys ..... filter the blood and remove unwanted and waste substances from it.
11. ... Water ..... is very important because it assists in the transport of nutrients and wastes.
12. The .. liver ..... removes lipids from the blood and modifies them before they are sent to the body's fat deposits for storage. This organ also helps get rid of excess ..... protein ....., which can form toxic compounds dangerous to the body.
13. An .. electrocardiogram .... (ECG) shows the electrical activity of a person's heart.
14. A person with kidney disease may be unable to effectively remove the ... wastes ..... from the blood.
15. Respiration in animals uses ..... oxygen ..... and releases carbon dioxide.
16. The exchange of oxygen and carbon dioxide takes place in the ..... lungs ..... .
17. Asthma attacks can be triggered by many different things, including cigarette smoke and dust ..... mites ..... .

translocation	valves	kidneys	phloem
water	haemoglobin	protein	capillaries
plasma	vascular bundles	liver	excretion
xylem vessels	veins	deoxygenated	red blood cells
wastes	oxygen	blood vessels	blood platelets
mites	arteries	transpiration	lungs
electrocardiogram	oxygenated	leucocytes
