Worksheet 10.6

Psychology: Summary

Answers

Fill in the gaps.

1. affect: any experience associated with a feeling or emotion
2. insomnia: a sleep disorder that is characterised by lack of sleep and poor quality sleep
3. intelligence: 'the global capacity to act purposefully, to think rationally, and to deal with the environment'
4. kinesics: a form of non-verbal communication
5. mental disorder: any disabling behavioural, cognitive or mental health problem that decreases a person's level of functioning in society
6. Prevalence: how commonly a disorder occurs in the community
7. Psychology: the systematic study of thoughts, feelings and behaviours
8. Behaviour therapy: a therapy that aims to change a person's behaviour through learning
9. Phobia: an intense and irrational fear of an object or situation that affects everyday functioning
10. Arousal: a state of physical or psychological alertness, or awareness of the environment
11. Psychopathology: the study of mental illness
12. Corpus callosum: a bridge of nerve fibres that connects the left and right hemispheres of the brain

Write definitions for the following terms.

1. cerebral hemispheres: the brain is divided into two halves; the left and right half or hemisphere
2. cerebral cortex: the outer layer of the cerebrum in the human brain
3. depression: a mood state often resulting in a mental disorder, usually characterised by sadness, hopelessness and despair
4. schizophrenia: a mental disorder characterised by a split from reality, delusions and hallucinations

Write a question for which the following words are the answer.

1. personality

   What is the name of the group of stable characteristics unique to an individual that determines a person's thoughts, feelings and behaviour?
2. antipsychotic drug

   Which type of drug is used to treat schizophrenia by reducing the number of symptoms?
3. cognitive therapy

   Which psychological therapy deals with what we are thinking and how this affects our emotions and behaviour?
4. systematic desensitisation

   Which behavioural therapy is used to treat phobias by repeatedly linking relaxation with the feared object until the person is not afraid of it anymore?
