Food chains and webs

The plants and animals in a food chain are in the same **ecosystem.** All he living things in one **habitat** are called a **community**. A community and its environment are known as an **ecosystem**.

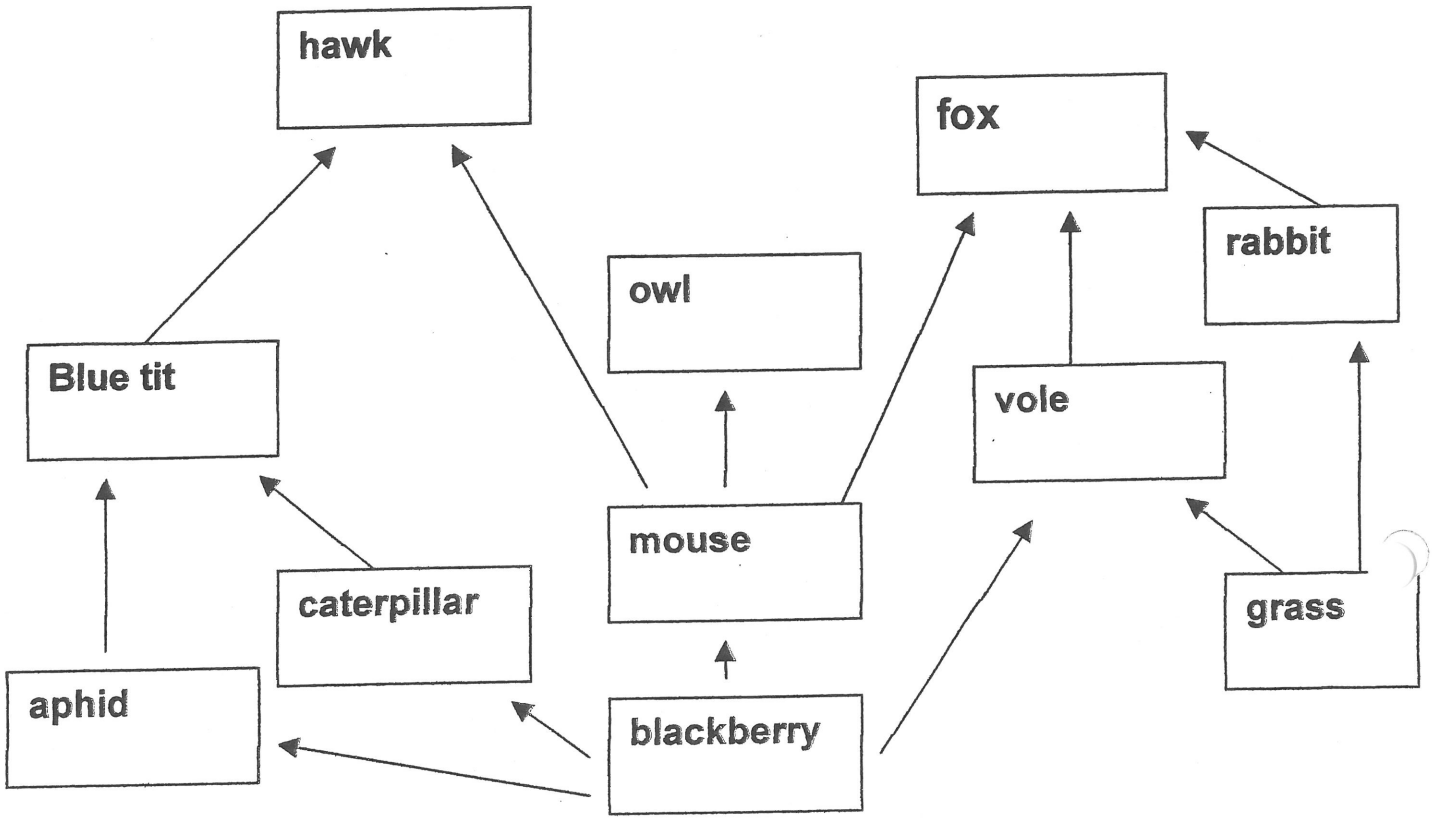

1. *Join the words to their meanings.*

carnivores	**Animals that can eat both plants and animals**
omnivores	**Animals that eat plants**
herbivores	**Animals that eat other animals**
consumers	**Organisms that can make their own food**
producers	**Organisms that need to eat other organisms**

2. In the food chain below, what do the arrows mean?

Tiny plants → squid → whale

3. Write down the name of the herbivore, the carnivore and the producer. Explain how you know these.

4. Look at this woodland food web.

a) Name the carnivores.

b) Write down all the food chains that start with the blackberry and end with the hawk.

c) Explain what might happen to the number of voles and rabbits if the amount of grass increases.

d) Explain what might happen to the number of blue tits if the hawk dies.
